

FOR IMMEDIATE RELEASE

**GRANDSTREAM NETWORKS AND RNK COMMUNICATIONS ANNOUNCE
INTEROPERABILITY**

GRANDSTREAM AND RNK PARTNER TO OFFER A FULL SERVICE SOLUTION

Brookline, MA (June 20, 2008) – Grandstream Networks and RNK Communications announce today that Grandstream’s all-in-1 IPPBX, the GXE502x has been tested and certified interoperable with RNK Communications’ global VoIP network. The two companies have also teamed efforts to create a one button provisioning protocol to easily provision edge CPE devices onto RNK Communications’ targeted VoIP network. By working together, Grandstream and RNK have collaborated to meet the needs of the SMB looking for ease-of-use, high quality and affordability from their IP-PBX and network. Grandstream powerful hardware solution combined with RNK’s robust network now offer the small to medium sized business worldwide a competitive, affordable complete solution.

Grandstream and RNK have collaborated to provide the SMB with a much needed, overdue solution that eliminates pain points that have hindered VoIP proliferation. Such points include unpredictable capital and operational costs, complicated set-up and administration, and overall unreliability from the IP-PBX and network. Grandstream’s hardware and RNK’s network alone tackle the problems of unpredictable capital costs and unreliability. One-button provisioning rids the SMB of the complicated set-up and administration involved in IP-PBX installation and deployment by tying the network and hardware together for seamless integration. With one-button provisioning Grandstream’s GXE502x and RNK’s SIP Trunks are tightly coupled to allow near out-of-box provisioning for the SMB, thus eliminating the taxing administration and set-up time often experienced in the field. Grandstream’s network elements will provide the end-user with an easy-to-use interface with a single “1-button” request for RNK’s VoIP services. Through this one button “push” the end-user will be able to instantly provision a complex network element onto RNK’s targeted network. In addition to eliminating the time and resources, this technology eliminates human error, connectivity issues and ensures data integrity and security.

“Partnering with Grandstream on the hardware and now one button provisioning front opens many new, exciting opportunities for us. The SMB now has a solution to ease the constraints of VoIP deployment encountered in the past.” Says Dan Koch, Director of Business Development for RNK. “We are pleased that Grandstream’s all-in-1 IPPBX is generally available, and are excited about the new protocol that will undoubtedly change the landscape of VoIP across the SMB market.”

“We are very pleased to announce our partnership with RNK. RNK’s strong global telecommunications presence combined with the powerful capabilities of our GXE502x IPPBX is a powerful turnkey solution for the SMB,” adds David Li, CEO of Grandstream Networks. “We look forward to continue working closely with RNK to ensure a top solution for the SMB.”

ABOUT RNK COMMUNICATIONS:

RNK Communications (RNK) is a full-service global telecommunications provider headquartered in Dedham, Massachusetts. Since its founding as a competitive local exchange carrier (CLEC) in 1997, the privately held corporation has continued to expand and diversify to meet the changing needs of the telecom market. Sound business strategy, time-tested values, and clear vision have fueled RNK's long-term success in a volatile industry. The company's consistent track record of growth and profitability speaks to its ability to not only satisfy customers but also earn their enduring loyalty. Built on a rock-solid commitment to quality, reliability, and integrity, RNK stands out as the global communications provider customers can count on to go the distance.

ABOUT GRANDSTREAM NETWORKS

Grandstream Networks is a leading designer and manufacturer of innovative, affordable, and high quality IP voice and video products for the worldwide broadband telephony market. Their products are fully compatible with the SIP industry standard, field proven with large and rapidly growing deployed base, and have broad interoperability with the majority of 3rd party SIP products on the market today.
