Special Information for GXE-5000 release 1.0.1.63

Following are new features released in 1.0.1.63(after 1.0.1.50)

1.   Improved GXE DHCP server: GXE will keep a record of the leases and will re-assign the same IP if the client is rebooted. This will prevent conflicts with multiple SIP registration at different IP address.

2.   New UPnP module: It will provide a better compatibility with router implementations and fixes some UPnP related application crashes (500 error webUI).

3.   Fixed UK caller ID detection.
