Grandstream Networks Announces Product Enhancements to GXP-2000 SIP Enterprise Phone

Brookline, MA

Continuing the commitment to release innovative, high-quality and affordable IP voice and video products, Grandstream Networks, today announced several product improvements for the award-winning GXP-2000 SIP Enterprise Phone. The product improvements include:

- Multi-language support (Spanish, French, Italian, German, and more)
- SRTP (secure RTP)
- SIMPLE (SIP Messaging and Presence) support
- XML and LDAP support
- Customizable LCD screen and downloadable phone book (via XML)
- Dual-color LEDs and support of external key extension module (new hardware release)
- Improved AEC/AGC for speakerphone

All the improvements enhance the performance of the GXP-2000 and improve the end-user experience. The XML and LDAP support upgrades enable the GXP-2000 to be easily integrated into most enterprise directory applications, with customizable interfaces for multi-lingual enterprise environments, call centers or calling booths. The most dramatic improvements are the multi-language support for the menu, customizable XML application capabilities, and secure RTP. These features now enable users anywhere in the world to use the GXP-2000 in their preferred language, to interact with their existing enterprise applications seamlessly, and without fear of compromise on communication privacy. In addition to SRTP, Grandstream also plans to add support for SIP over TLS in the near future.

“These feature upgrades really position the GXP-2000 as a true enterprise SIP phone, allowing all of our customers, not matter where they work, to communicate in multiple languages.”, said David Li, CEO of Grandstream Networks. “We believe this feature, combined with customizable applications capabilities and enhanced security protection sets our phone apart from our competitors.”
