**IPSMARX SMARXVIDEO & GRANDSTREAM IP VIDEO PHONE PROVIDE
HIGH-QUALITY VIDEO OVER IP SOLUTION**

Companies create an easy affordable way to communicate using the Internet.

IT EXPO, LOS ANGELES CONVENTION CENTER, (September 10, 2007) — IPsmarx Technology Inc., a leading provider of fully featured, turn-key Voice over IP (VoIP) solutions and Grandstream Networks Inc., an award winning designer and manufacturer of IP voice and video products, today announced that clients who own the IPsmarx SoftSwitch solution can now offer Video over IP to their end-users using the Grandstream GXV3000 IP video phone.

“The new SmarxVideo module will enable IPsmarx Softswitch owners to provide cutting-edge IP video solutions to their customers,” states IPsmarx VP of Sales Ludy Reveron. “As one of only a few companies to offer Video over IP, we are extremely proud to give our clients new opportunities to grow their businesses while offering the latest in next generation technologies to their own customers.”

IPsmarx’s innovative SmarxVideo provides clients with simultaneous voice and video support and added features to personalize and unify communications. Service providers are now able to offer advanced features to both residential and business end-users. The residential end-users will have closer correspondence with friends and family while businesses can use the feature to add an increased level of personalization with their partners and clients, especially those located in other countries or remote cities.

The Grandstream GXV3000 is an advanced IP video phone based on SIP and H.264/H.263 standard that is easy to use and competitively priced. The GXV combines sleek design and technology features with excellent picture quality and ease of deployment, and is the first H.264 based IP video phone that supports real-time (up to 30fps) high-quality video at very modest bandwidth levels (as low as 32kbps, up to 1Mbps). Customers can capture nearly all viewing angles using the adjustable 5.6 inch TFT LCD screen and VGA camera, enabling superior real-time videoconferences from the home or office.

“IPsmarx is very progressive and we are excited they chose our GXV3000 IP video phone to offer advanced IP voice and video telephony services to their business market,” said David Li, CEO of Grandstream Networks. “IPsmarx’ adoption of the award-winning GXV3000 validates the compelling value our products bring to the service provider market. This partnership reflects the growing market demand for high-quality and affordable IP video telephony services over the public Internet. We look forward to a great relationship with IPsmarx and the further development of the video communication experience in both the consumer and business market.”
