**GRANDSTREAM ANNOUNCES GENERAL AVAILABILITY OF NEW IP MULTIMEDIA DEVICE
GIVING CONSUMERS AND SMBs FREE REAL-TIME VIDEO/VOICE CALLING AND
ALWAYS-ON WEB ENTERTAINMENT AND SOCIAL NETWORKING APPLICATIONS**

GXV3140 ENHANCES PERSONAL AND BUSINESS RELATIONSHIPS WITH VISUAL COMMUNICATING

BROOKLINE, Mass., September 1, 2009 – Grandstream Networks (www.grandstream.com), a leading end-to-end video and voice over IP solution manufacturer, announced today the general availability of the GXV3140 IP Multimedia Phone, a new class of broadband IP multimedia phone that marries Web and social multimedia applications with free, real-time IP video and voice calling. The GXV3140 allows consumers and small to medium-size businesses (SMBs) to harness the power and cost-effectiveness of Voice-and-Video-over-Internet-Protocol (VoIP) to make free video calls worldwide and to strengthen relationships with business colleagues/customers as well as family and friends. In addition, the always-on GXV3140 comes with an integrated web browser giving users one-touch access to personalized RSS feeds of real-time online information services (news updates, stock updates, weather forecasts, directory searches, etc.), thousands of Internet radio stations, social networking sites and popular streaming Internet entertainment sites like YouTube (coming soon).

"The GXV3140 Multimedia Phone is a top of the line choice for a desktop video and multimedia phone", says Mike Evanisko, Vice President of Technology at 888VoipStore, "With its high quality audio & video, simple configuration, and built-in IPVideoTalk for free peer-to-peer calling, the GXV3140 finally brings affordable desktop video and multimedia to the consumer and SMB market spaces."

Free Video Calling to the Masses

Video conferencing was once reserved only for big businesses that could afford the exorbitant equipment and network access costs. With an estimated 57% of adults in the U.S. having broadband access to the home¹, the Internet makes it easy to deliver real-time video and web entertainment to enhance people's lives. Grandstream's GXV3140 brings affordable visual communications to the masses by delivering face-to-face video calling over broadband with "IP Video Talk", embedded software in the phone that enables free peer-to-peer calling out of the box.

The GXV3140 is portable and lets users take the device with them wherever there is a broadband connection. For larger picture projection, the GXV3140 can be plugged into a computer or TV.

Hear and See Applications

- Homeowners or business users can stay closely connected with friends, family, colleagues and business partners located around the world for minimum cost (especially relevant in today's economic downturn)
- Older children can keep in visual contact with elderly parents living independently away from them across town or across the country

- Military personnel deployed worldwide can conduct free video calls with loved ones at home
- Keep in touch with children away at college
- Employers can remain in visual contact with employees located in remote office locations
- After hours visual concierge for the hospitality industry
- Virtual receptionist for small business and enterprise

“The media phone market, for both businesses and consumers, seems poised to take off with a number of communications vendors introducing new media phones this year for the home or office,” says Sandra M. Gustavsen an Analyst at T3i Group LLC. “While one can see the many benefits in combining a telephone with video and Internet content, the phone’s price will be a key factor in our current economy. Grandstream’s GXV3140 offers users a multimedia experience complete with a full duplex speakerphone, IP video conferencing and support for today’s popular social multimedia applications for \$299, a price that competes well with other new “consumer-oriented” media phones, but which is significantly lower than other “business” media phones entering the market.”

GXV3140 Features and Benefits

- Full HTML web browser
- YouTube streaming
- IM with Yahoo/MSN/Google
- Thousands of Internet radio stations & popular online music networks such as Last.fm
- Web photo album with Yahoo Flickr, Photobucket, Phanfare
- Personalized RSS feeds of news/weather/stock, horoscope
- 4.3” 480x272 digital color LCD and 1.3M pixel camera with privacy shutter
- Full duplex speakerphone
- Support for 9 different languages
- Peripheral support includes TV-Out, USB, SD, etc.

The GXV3140 was recently honored with Technology Marketing Corporation (TMC) 2009 Innovation and Next Generation Network Product of the Year Award.

“The integration of multimedia and video conference in an IP phone device lets anyone with broadband access enjoy the power of some PC-grade social multimedia applications and the always-on convenience of the home telephone,” said David Li, CEO, Grandstream Networks. “With the built-in FREE peer-to-peer video calling capability, the GXV3140 allows people to easily and economically stay in close face-to-face contact with family, friends and business associates.” He added, “The GXV3140 has something for everyone. Even individuals that are not as tech savvy or don’t own a PC can feel “with it” by utilizing the video capabilities of the GXV3140 as well as the latest and greatest Internet entertainment and information applications like weather, music, photos, video streaming and many more.”

Pricing and Availability

The GXV3140 IP Multimedia Phone is available immediately through Grandstream’s worldwide channel partners for a manufacturer suggested retail price of \$299.

About Grandstream Networks

Grandstream Networks is a leading end-to-end video and voice over IP solution manufacturer. Its comprehensive product suite offers unrivaled flexibility, scalability and affordability for the worldwide broadband market. Grandstream’s cutting edge portfolio of IP products brings the small to medium sized business, enterprise and consumer markets a solution that offers unprecedented value and functionality.

¹ According to Pew Internet & American Life Project, it was estimated that as of December 2008, 57 percent of adults in the US had broadband access at home. Compared to 42% in March 2006 and to 30% in March 2005.
