

AVI Tool Version 1.0

All the video files recorded using GSurf or GSNVR can be played back using the GSReplay tool on any Windows computer. In case the user wants to be able to convert files to a more popular format like .avi which can be played by any player, then he would have to use the AVI conversion tool provided. This tool will converted any of the H.264 files recorded to an .avi file that can be taken anywhere.

The AVItool only run on windows

To convert a file simply click on the “Add” button and select the file(s) that you want to be converted.

To delete a file simply click on the file that you want to delete and then click on the “Delete” button

The only output format is .AVI.

To specify the output directory simply click on the “...” button to select where the files will be saved.

To start the conversion of the files, click on the “Start” button. You will see the progress of each file being converted under the “state” column; to stop the conversion click on the “Stop” button.
