CHANGE LOG

This section documents significant changes from previous firmware versions. Only major new features or major document updates are listed here. Minor updates for corrections or editing are not documented here.

GS Wave Version 1.0.3.26

- Added support for FIR and PLI. [Grandstream Wave Technical Specifications]
- Added support to delete call history [Delete All Call History]
- Added support for 100rel [Enable 100rel]

GS Wave Version 1.0.3.19

No major changes

GS Wave Version 1.0.3.16

- Added provisioning settings support [Provisioning Settings].
- Added Filter characters configuration support [Filter Characters].
- Added Local RTP port configuration support [Local RTP Port].

GS Wave Version 1.0.2.16

- Added video software encode feature.
- Add IP call feature [Direct IP Call].
- Added Speaker / MIC gain settings [Audio Settings].
- Added audio recording feature [Call Recording].
- Add “Check SIP User ID for Incoming INVITE” [Check SIP User ID for Incoming Invite].
- Add GDS Settings and open the door feature [GDS Settings] [CONNECTING GS WAVE WITH GDS3710 DOOR SYSTEM].
- Support audio Codec G.729 [Voice / Video Codecs and Capabilities] [Preferred Vocoder].
- Remove IPVideoTalk account.

GS Wave Version 1.0.2.2

- This is the initial version for GS Wave Android™.
WELCOME

Thank you for using Grandstream Wave. To meet the requirements of our customers, Grandstream Wave emerged on the basis of our existing multimedia VoIP Phones and enable users to move freely and continue to receive calls from any business or residential SIP account. The Grandstream Wave is a free softphone application that allows users to connect to their SIP accounts from anywhere in the world and it supports Android™ 4.0 and higher, and it is compatible with most of Android™ mobile phones and tablets. By combining powerful phone functions and integration of Grandstream UCM applications, businesses throughout the world can use Grandstream Wave for all communication and productivity requirements with unprecedented high quality experience.
PRODUCT OVERVIEW

Feature Highlights

The following tables contain the major features of the GS Wave IOS™:

<table>
<thead>
<tr>
<th>Grandstream Wave Android™</th>
<th>supported Android™ 4.0 and higher</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Standard SIP-based softphone with exceptional voice quality</td>
</tr>
<tr>
<td></td>
<td>Strong security features including SIP over TLS and 128 or 256-bit SRTP</td>
</tr>
<tr>
<td></td>
<td>Support 6 SIP accounts, up to 6-way audio conferences</td>
</tr>
<tr>
<td></td>
<td>Support CID, voicemail and call encryption</td>
</tr>
<tr>
<td></td>
<td>Support SBC with local Contacts and call history on the phone</td>
</tr>
<tr>
<td></td>
<td>Enterprise features including UCM integration, BLF, call transfer/pickup, LDAP</td>
</tr>
<tr>
<td></td>
<td>Powerful NAT traversal options including automatic NAT discovery, STUN and UPnP</td>
</tr>
<tr>
<td></td>
<td>Automatic call forward based on time and location rules</td>
</tr>
<tr>
<td></td>
<td>Support G.711, G.726, G.722, iLBC, Opus, and G.729</td>
</tr>
<tr>
<td></td>
<td>Automatic provision including XML provision and QR code scan</td>
</tr>
<tr>
<td></td>
<td>Fully customizable skins and themes for optional branding needs</td>
</tr>
</tbody>

Grandstream Wave Technical Specifications

The following table resumes all the technical specifications including the protocols / standards supported, voice codecs, telephony features, languages and upgrade/provisioning settings for the GS Wave:

<table>
<thead>
<tr>
<th>Lines</th>
<th>6 lines with up to 6 independent SIP accounts</th>
</tr>
</thead>
<tbody>
<tr>
<td>Protocols and Standards</td>
<td>SIP RFC3261, TCP/IP/UDP, RTP/RTCP, HTTP/HTTPS, DNS (A record, SRV, NAPTR), STUN/ICE, SIMPLE, LDAP, TLS, SRTP, IPv6</td>
</tr>
<tr>
<td>Network</td>
<td>Support 2G/3G/4G and WiFi</td>
</tr>
<tr>
<td>Graphic Display</td>
<td>480x800 resolution or higher</td>
</tr>
<tr>
<td>Camera</td>
<td>Support forward or rear facing cameras</td>
</tr>
<tr>
<td>Bluetooth</td>
<td>Yes, supports mobile device’s bluetooth</td>
</tr>
</tbody>
</table>
### Voice / Video Codec and Capabilities

| **Voice / Video Codec and Capabilities** | Support G.711µ/a, G.722 (wide-band), G.726-32, iLBC, G.729, GSM, DTMF (In audio, RFC2833, SIP INFO), Opus, HD Audio, H264, video resolution up to 720p HD, FIR and PLI |

### DTMF

| **DTMF** | In audio, RFC2833, SIP INFO |

### Audio Quality

| **Audio Quality** | Full-duplex speaker, AEC, AGC, Noise Reduction, PLC, Adaptive JIB |

### Telephony Features

| **Telephony Features** | Call hold, mute, transfer, forward (unconditional/no-answer/busy/time-based), call park, paging/intercom, DND (Do Not Disturb), busy lamp field (BLF), LDAP contacts, call waiting, call history, flexible dial plan, custom ringtones, server redundancy & fail-over, BLF |

### UCM Integration

| **UCM Integration** | Supports many functions like QR code scan |

### Mobile Device Integration

| **Mobile Device Integration** | Supports background mode, proximity sensor for in-call touch screen and keys lock, auto rotation, GPS location based call forward (pending) |

### Feature Functions

| **Feature Functions** | LDAP, MWI (Message Waiting Indicator), display instant online status, call history and messages |

### QoS

| **QoS** | Layer 3 (ToS, DiffServ, MPLS) QoS |

### Security

| **Security** | Support AES configuration file, TLS encryption, SRTP encryption (128-bit and 256-bit), HTTPS |

### Multi-language

| **Multi-language** | English, Simplified Chinese, Polish, German, Russian, Italian, Arabic, Spanish, Portuguese, French, etc. |

---

**Grandstream Wave Android™ Prerequisites**

The Grandstream Wave is compatible with most of Android™ mobile phones and tablets running Android™ 4.0 or higher version and it supports 2G/3G/4G and WiFi. Users could download Grandstream Wave via scan QR code, or from Google Play store.

---

**Note:** When using the Grandstream Wave for the first time, users have to confirm whether allow the application to read local contacts from the phone. If it allows, users could view local contacts on the corresponding Grandstream Wave screen.

To fully manipulate the Grandstream Wave capacitive touch screen, use fingers to operate following the introductions below on the Grandstream Wave icons, buttons, menu items, onscreen keyboard, etc.
Figure 1: Grandstream Wave Finger Gestures on the Touchscreen

- **Tap**: Slightly touch the screen with fingertip once to initiate menu, options or applications.
- **Long Press**: Touch the screen with fingertip for about 2 seconds without lifting finger from the screen to bring up the context menu for more operations.
- **Press and Drag**: Press the item and move it by dragging the finger up, down, left or right, without lifting finger from the screen.
- **Flick and Slide**: Touch the screen with fingertip and slide over the screen. For example, users could slide up to scroll up the page, slide down to open dropdown menu, slide left to delete an item from the list. If the finger stays on the screen for too long, the item may be selected and sliding will not occur.

**Using Grandstream Wave**

This chapter provides basic operations on the GS wave, including making / receiving calls, call transfer, conference calls, managing contacts and etc…

**Dial Screen**

Tap on the keypad button at the bottom of screen to open dial screen, as shown in figure 2.
Dialing a Number Directly

1. Access the dial screen;

2. Put one finger on left screen edge, and slide to right or tap on the upper left corner, select the account as shown on the following screenshot;
3. Tap the right area to go back to the dial screen;

4. Enter the phone number on the keypad;

5. Tap on  to dial out with SIP account; Tap on  and select "Local Call", "Video Call" or "Paging" to dial out via local phone number, or select "New Contact" to add the number as a contact quickly.

Note:

- By default, Grandstream Wave allows users to press # key as SEND key. This behavior can be disabled via set option "Use # as Dial Key" to "No" under Settings->Account Settings.
- If inserting an active SIM card into the phone, users could make calls with the SIM card number but cannot send messages with the local phone number.

Redial

Users can dial out the last dialed number if there is dialed call history.

1. Access the dial screen;

2. Press # key to dial out the last dialed number.
Dialing a Number via Call History

The Grandstream Wave call history is listed on the upper of the dial screen. It displays all call histories (local and SIP account) and missed calls. Navigate on the call history entries by tapping on button on the bottom of the main screen to slide up/down as displayed on the following figure.

![Call History Entry](image)

1. Tap on Keypad or roll horizontal in the direction of the arrow to view the call history.
2. Tap on one call history entry to dial out. The call screen is pictured as right.

**Figure 4: Dial-up via Call History**

**Note:** Dialing out through call history will use the account which made the last call.

Dialing a Number via Contacts

Access Contacts by tapping on icon on the bottom of the main screen, the SIP contacts and LDAP Contacts (please go to Settings page to configure first) are shown up individually. Follow the steps in figure 6 to dial a number via Contacts.
Switching Audio Channel during Call

Users could switch lines by sliding the call screen when there are multiple calls, as shown in figure below.
Answering Calls

Single Incoming Call

When the phone is at idle state, and there is an incoming audio call, the status bar will display the icon and the phone screen is as shown on the figure below.

Tap on button [Answer] to answer the call via speaker, or tap on button [Reject] to reject the call.

Figure 6: Switch Call Lines
When there is a video call, you can see the screen is as shown below.

**Figure 7: Single Incoming Audio Call**

**Figure 8: Single Incoming Video Call**
**Multiple Incoming Calls**

When there is another incoming audio call during an active call, the status bar will display the icon, and at the same time, users will hear call waiting tone, with the screen displaying the caller’s name or number for the incoming call. A prompt appears for users to confirm as shown on the following figure.

Tap on button **Answer** to answer the call, once the new call is answered, the current active call will be placed on hold. If the new call is rejected by tapping on button **Reject**, the current active call will not be interrupted.

![Figure 9: Multiple Calls - Audio call](image)

If the incoming call is video call, the screen is shown as below. Tap on **Audio** or **Video** to answer. Once the new call is answered, the current active call will be placed on hold. If the new call is rejected by tapping on button **Reject**, the current active call will not be interrupted.
Active Call

During an active call, users could hold/resume call, mute/unmute, input DTMF, add new call, initiate conference, end a call or switch audio channel, turn on/off video, switch front/rear camera. Tap on left screen, and slide right to bring up the lines list. Users could switch to other lines or add a new call.
Figure 11: Audio Call Interface

- Slide to right to add new call or switch lines.
- **Speaker**: Switch voice channels to speaker or 3.5mm headset if it is plugged in.
- **Hold/UnHold**: During the call, users could press the HOLD button to hold or resume the call at any time.
- **Keypad**: Tap on the icon to bring up digital soft keypad for inputting DTMF.
- **More**: Access more operations including Home, Transfer, Conference and Mute/Unmute.
- **Home**: Back to the home screen (dial screen), the active call interface will be hidden; users could tap on button at the upper left corner of the screen to go back to the call interface.
- **Transfer**: Switch to the transfer screen. Grandstream Wave supports blind transfer and attended transfer. Please refer to chapter *Call Transfer* for more details.
- **Video On**: Enable video call. Tap to dial up video call to the callee.
- **Conference**: Bring up conference screen.
- **Mute**: Tap on the icon to mute/unmute the call.
- **End**: Tap on the icon to end the call.
The video call screen is shown below; the basic operations are the same as audio call.

Figure 12 Video Call Interface

**Call Hold/Resume**

During the active call, press the **HOLD** button to put the call on hold. Users could dial up or answer a new call. The call hold screen is displayed on the following screenshot:
To resume the call, press the UNHOLD button again to resume the call if the current active call is put on hold.

**Mute**

During an active call, press the mute button ✈️ to mute the call. Press the button mute ✈️ again to unmute the call. The mute screen is displayed on the following figure:
Switching Audio Channel During Call

Grandstream Wave allows users to switch audio channel among handset (if user plugs in headset, the handset status will be turned into headset status), speaker or Bluetooth headset when making calls.

Following screenshots shows the call screen when using the Bluetooth, tap on button to switch channels.
Call Recording

During an active call, users can start easily recording the outgoing audio conversation and retrieve the recording stored on the internal memory of the phone under the folder named “Record” as displayed on the following screenshots.

Figure 15: Call via Bluetooth

Figure 16: Call Recording
**Missed Calls**

When there is a missed call, the phone will display 📞 on the status bar and prompt on Grandstream Wave call history list, as shown in figure below.

![Missed Call Screen](image)

**Figure 17: Missed Call Screen**

**Call Transfer**

A call can be transferred to another party during the call. The Grandstream Wave supports blind transfer and attended transfer.
Blind Transfer

When the ringback tone is played, users will automatically go back to the main screen (dial screen) to complete the transfer after the callee answers the call.

**Note:** If entered incorrect digits, tap on button to delete the digits one by one, or long press it to clear all digits.

**Attended Transfer After Calling**

Grandstream Wave supports attended transfer before or after calling, which provides users a fast and easy way to complete attended transfer. Make an active call first and follow the steps below to transfer the call to the third party.
Users can also consult the third party first before transferring the call. The following steps illustrate how to attend before calling:

1. During an active call, slide to right to access call line screen.
2. Tap on "Add Call" to dial the number for the second call and make sure the call is established. This will place the previous call on hold.
3. During the new active call, tap on "More" and select "Transfer" in the available options to access the transfer screen as shown in figure on the right.
4. Tap on the line on hold to transfer the call.

**Attended Transfer Before Calling**

Users can also consult the third party first before transferring the call. The following steps illustrate how to attend before calling:
1. During an active call, tap on “More” and select “Transfer” in the available options to access the transfer screen.

2. Input phone number and then switch the transfer mode to “Attended” on the upper right corner to access the Transfer / Split screen.

3. If the third party has not answered the call, the caller could tap on “Cancel” to end transfer.

4. If the new call is established, tap on “Transfer” to transfer the call. If tap on “Split”, it will place the previous call on hold.

**Figure 20: Attended Transfer before Calling - Split**

**6-Way Conference**

Grandstream Wave supports up to 6-way conferencing. The conference screen is displayed on the screenshot below:
Long press one conference entry to delete it.

Users could start or delete the conference, or edit conference members after accessing the conference screen.

Figure 21: Grandstream Wave Conference Screen
Add New Conference

1. Tap on “Conf” to access the Conference screen.
2. Tap on “+” at the upper right corner to add a new conference.
3. Users can edit conference name or add participant(s).
4. Check numbers from the Contacts, then tap on “Add” to add participants to conference or enter a new number in input box.

Figure 22: Grandstream Wave Conference - Add New Call to the Conference

Adding a participant to conference via 2 ways:

- Enter phone number in the input box. If this is an existing contact in the Grandstream Wave, it will be shown up. Then, users could add it to the conference.
- If the conference has started and there already exists an existing line, check the line and tap on “Add” to add the line to conference directly.

Initiating Conference

During an active call, tap on "More" and select "Conference" to access conference room. Users could add new participants if there exits an active call.
While all participants have been in the conference, users could tap on the buttons below to make the corresponding operations.

- **Speaker**: Enable the speaker for the conference.
- **Hold**: Hold the conference.
- **Mute**: Mute the host and each conference participant individually.
- **Delete**: Delete each conference participant.

When the conference participant is disconnected, or the call with the participant is over, tap 📞 on the top right corner of the participant to redial.
Removing Participant from Conference

To remove a participant from the conference, users could press DELETE button on phone screen, then tap on icon at the upper right corner of the participant, and then it will be removed.

![Figure 24: Grandstream Wave Conference - Delete Conference participant](image)

Mute/Unmute Conference

During an active conference, users could press MUTE button on phone screen, and then tap on at the upper right corner of the member to mute the member. The muted member will not be heard by other members, but can hear other members, while it still exists on the conference screen, the muted member in shown as.
**Hold/Resume Conference**

During the conference, users could press the **HOLD** button on phone screen to hold the conference with all participants at any time. If the remote participant presses the **HOLD** button, it will only hold his/her own call from the conference, as shown on the following figure:
To end the conference, users could tap on phone screen to disconnect all the participants from the conference. If the remote participant hangs up the call, it will be disconnected from the conference, but other participants in the conference will stay in the conference.

**Direct IP Call**

The GS wave supports Direct IP Call which allow users to make calls without a SIP proxy. VoIP calls can be made between the phone running the application and the destination phone if:
- The phone running the application and the destination phone have public IP addresses, Or
- Both are on the same LAN/VPN using private or public IP addresses, Or
- Both can be connected through a router using public or private IP addresses (with necessary port forwarding or DMZ).

To make a direct IP call, please follow the steps below:
1. Access the dial screen;
2. Input the target IP address. For example, if the target IP address is 192.168.1.60 and the port is 5062 (i.e., 192.168.1.60:5062), input the following: 192*168*1*60#5062
3. Press “Dial” button to initiate an audio call, or press more to access the call menu and choose “Video call” for initiating video calls.
Voicemail

When there is a new voicemail, the voicemail icon 📣 will show up on the status bar, and at the same time users could see a new message prompt on the Grandstream Wave messages list.

To configure voicemail UserID, go to **Settings->Account Settings->Edit Account** to fill in the details, as shown on the screenshot below.
To retrieve the voicemail:

1. Tap on "Messages" to access Messages screen.
2. Tap on "Voicemail" to access the voicemail screen.
3. Tap on the voicemail to dial out.
4. Listen to the voicemail by following the voice prompt.

Figure 29: Retrieve Voicemail
**Note**: To access the voicemail, users will be required to enter the voice mail password, please contact the service provider to obtain the password.

**Contacts**

Users can manage their phone contacts and SIP contacts in Grandstream Wave Contacts. To access Grandstream Wave Contacts, tap on button 📱 at the bottom of the main screen, as displayed on the following screenshot:

![Grandstream Wave Contacts Screen](image)

*Figure 30: Grandstream Wave Contacts Screen*
Add Contacts

1. Tap on "+" at the upper right corner to add a new contact.
2. Input contact information and tap on the check mark on the upper right corner to save the contact.

Figure 31: Grandstream Wave Add New Contact

Search Contacts

Tap on the search box on the Contacts screen to access the search screen, as shown on screenshot below:
Enter the contact name or number to search, the contact will be updated and displayed automatically when entering the initial digits. Tap on the number to view details.

**View Contact**

Tap on one contact to view details or edit, as displayed on the following screenshot:
Dial up the audio call.

Access the Messages editing screen.

Dial up the video call.

**Edit Contact**

Long press the contact on the contact list to bring up the dialog box, tap on **Edit** to access the editing screen;

Or long press the contact to access the details screen, tap on button at the upper right corner, then select **Edit**.

**Delete Contact**

Follow one of the following 3 ways to delete contact.

1. Long press one contact on the contact list to bring up the dialog box, select **Delete** to access the editing screen.
2. Long press one contact on the contact list to bring up the dialog box, select **Batch Remove** to access batch remove screen, check contacts and tap on **Trash Can** on the upper right corner to delete.
4. Tap on one contact to access the detail interface, tap on button at the upper right corner, then select Delete Contact, as shown on the following screenshot.

![Image of Contact Details Screen]

**Figure 36: Contact Details Screen**

**Add Contact to Favorites**

To add a contact to favorites, as shown in figure below:
Besides the operation mentioned above, users could also select one contact in the Contacts and long press it to bring up the dialog box, select "Add to Favorites" to add contact to Favorites. Via the similar way, users could delete contacts from Favorites by selecting "Remove from Favorites".

**LDAP Contacts**

Users could access LDAP screen to search LDAP contacts, view LDAP contact details and add LDAP contact. Please go to Settings->Advanced Settings->LDAP Settings to fill in details.
Call History

To view recent call history or view classified call history on Grandstream Wave, tap on the dial screen or slide down the call history, as shown on screenshot below:
Tap on one call history entry to dial out with the last dial-out account. To access the details for this entry, tap on the right side of the entry, as shown on following screenshot:

Users could view recent call history of this entry, make calls or send messages to it (not applicable to SIM card number or anonymous call). Tap on button at the upper right corner to make operations like **Edit**.
**Contact, Add to Favorites, or Delete All Call History.** If the call is not an existing contact, save it to **Contacts** before making the operations.

![Call History Details Screen - Edit Contact](image)

**Figure 41: Call History Details Screen - Edit Contact**

User can also delete the Call history from Settings menu by clicking on “Delete All Call History” as shown in the below image.

![Settings Menu](image)

**Figure 42: Delete All Call History**
Messages

Messages function allows users to send/receive messages. Tap on button to access the Messages screen, as shown on the following screenshot.

Note: Messages function is not available in all countries and regions. Please contact your service provider for more details.

View Message

The Message screen displays sent & received (draft) messages, the messages are classified by contacts names or numbers while sorted by sent & received time. Tap on one message to check the details, as shown on the following screenshot:
Figure 44: Grandstream Wave Message Details Screen
Create New Message

1. Access Messages screen and slide to right, select the account to send message.

2. Slide to left to go back to the Messages screen, tap on "+" to start composing a new message.

3. Add recipient in the textbox and input contents.

Figure 45: Create New Message

Tap 📱 on the right of the input box to add one contact or more from Grandstream Wave Contacts or input the contact phone number or name in the input box to find the corresponding contact. If the sent or received message is phone number or Email address, you can tap on the number to dial out directly or tap on the Email address to send an email.

Edit Message

Long press one message on the Messages screen, select "Batch Remove" in the pop up dialog box, and tap 🗑️ on the upper right corner to delete all messages with this number. Long press one message content to access the editing screen, users could edit, copy or forward one single message as shown on the figure below.
• Copy the selected message.

• Forward the selected message.

• Delete the selected message.

Figure 46: Grandstream Wave Message Screen - Edit Message
**SETTINGS**

For the first time using Grandstream Wave, go to the **Settings** screen to complete the basic settings, including **Account Settings**, **Advanced Settings**, **Custom Settings**, **About Version**, **Debug**, etc.

**Account Settings**

Grandstream Wave supports up to 6 independent SIP accounts and 6 lines. Users can make calls after registering the account to the SIP server. Tap on button + at the upper right corner of the **Account Settings** screen to add accounts. Users could add account via **Generic Accounts** or **VOIP Providers**. To add generic account, tapping on "**UCM Account (Scan QR Code)**" or "**UCM Account (Select QR Code Image)** ", or tap on "**SIP Account**" to add account, as shown on figure below.

The way to add VOIP Providers accounts is the same as add generic accounts, just select the providers in the list below and input required information.

![Add New Account Screen](image)

**UCM Account (Scan QR Code)**

To add account by QR code scan, please follow the steps below as shown in figure below.
1. Tap on "**UCM Account (Scan QR Code)** " to access the scan screen;
2. Scan the QR code containing configuration info sent from the UCM server to the mailbox;
3. Choose whether to overwrite account or add new account, and then the account will be added to the list.
Note: Users could add up to 6 accounts, if already reached the limit, you can select overwrite account only.

**UCM Account (Select QR Code Image)**

1. Tap on "UCM Account (Select QR Code Image)" to access the images screen;
2. Select the QR code image containing configuration info;
3. Choose whether to overwrite account or add account, and then the account will be added to the list.
Note: Users could add up to 6 accounts, if already reached the limit, you can select overwrite account only.

**SIP Account**

Follow the steps below to add account manually:

1. Tap on "SIP Account" to access the **Account Settings** screen, tap on the button on the right of "Active Account" to active the account;
2. Fill in account details and the SIP server address (provided by the service provider);
3. Tap ✔️ on the upper right corner to save the configuration and go back to the account settings screen;
4. The following figure 48 shows the accounts are successfully registered, and the account icon is in green 🟢. If the account icon is in red 🟥, it means the registration failed.
Users could also slide left to delete this account as shown in figure 49.
Table 3: Edit Account Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Activate Account</td>
<td>It is used to define whether to activate account.</td>
</tr>
<tr>
<td>Account Name</td>
<td>Defines the name associated to the account to be displayed on the LCD.</td>
</tr>
<tr>
<td>SIP Server</td>
<td>Defines the domain name or IP address of your SIP server, provided by your VoIP service provider (ITSP).</td>
</tr>
<tr>
<td>SIP User ID</td>
<td>Configures the user account information, provided by your VoIP service provider (ITSP). It's usually in the form of digits similar to phone number or the same as the phone number.</td>
</tr>
<tr>
<td>SIP Authentication ID</td>
<td>Configures the SIP service subscriber's Authenticate ID used for authentication. It can be identical to or different from the SIP User ID.</td>
</tr>
<tr>
<td>Password</td>
<td>Defines the account password required for Grandstream Wave to authenticate with the ITSP (SIP) server before the account can be registered.</td>
</tr>
<tr>
<td>VoiceMail UserID</td>
<td>Configure the voicemail user ID to retrieve voicemail by pressing LISTEN button on the message screen. This user ID is usually the VM portal access number. For example, the UCM server voicemail access number is *97.</td>
</tr>
<tr>
<td>Display Name</td>
<td>Configures the name to display on LCD when calling, it needs SIP server to support it if this function is enabled.</td>
</tr>
</tbody>
</table>

After configuring the account, users could tap on the existing account for more settings, such as General Settings, Call Settings, SIP Settings, Network Settings and Codec Settings.

Table 4: Account Settings - General Settings Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Activate Account</td>
<td>Activate / deactivate the SIP account.</td>
</tr>
<tr>
<td>Set as Default</td>
<td>It is used to set this account as default.</td>
</tr>
<tr>
<td>Edit Account</td>
<td>Edits the accounts settings and parameters.</td>
</tr>
<tr>
<td>Delete Account</td>
<td>Deletes the current account.</td>
</tr>
</tbody>
</table>

Table 5: Account Settings - Call Settings Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ringtone</td>
<td>Defines the ringtones played when receiving an incoming call.</td>
</tr>
<tr>
<td>DialPlan</td>
<td>Configures to either enable or disable the dial plan.</td>
</tr>
<tr>
<td>DialPlan Prefix</td>
<td>Configures the prefix to be added to each dialed number. All numbers use this account will automatically add the prefix. For example, if the prefix is 5, the phone number is 337, thus the dialing number is 5337.</td>
</tr>
<tr>
<td>DialPlan Settings</td>
<td>Configures the allowed dial plan for the phone.</td>
</tr>
<tr>
<td>Default setting</td>
<td>&quot;{ x+</td>
</tr>
<tr>
<td>Dial Plan Rules:</td>
<td>1. Accepted Digits: 1,2,3,4,5,6,7,8,9,0 , *, #, A,a,B,b,C,c,D,d;</td>
</tr>
<tr>
<td></td>
<td>2. Grammar:</td>
</tr>
<tr>
<td></td>
<td>x – any digit from 0-9</td>
</tr>
<tr>
<td></td>
<td>X – digits from 0-9, and letters from a-z, A-Z.</td>
</tr>
<tr>
<td></td>
<td>a) xx+ - at least 2 digit numbers</td>
</tr>
</tbody>
</table>
b) **xx** - only 2 digit numbers  

c) `^` - exclude  

d) `[3-5]` - any digit of 3, 4, or 5  

e) `[147]` - any digit of 1, 4, or 7  

f) - replace digit 2 with 011 when dialing  

g) `|` - the OR operand  

h) `{X123}` - match Z123, e123, 5123, …  

i) Back slash `\` Character can be used to escape specific letters. e.g. if `{\p\a\b\k\+\60}` dial plan is configured, park+60 should be able to pass dial plan check. This also can be used to escape Mark and User unreserved characters.  

**Mark** = 

- 

- `^`  

- `\`  

- `|`  

- `\`  

- `\`  

- `\`  

- `\`  

**User-unreserved** = 

- `^`  

- `^`  

- `^`  

- `^`  

- `^`  

- `^`  

- `^`  

- `^`  

**Use # as Dial Key**  

Configures the "#" key as the "Send" key. If enable, press the "#" key to dial the numbers out immediately; If set to disable, the "#" key will be included in the dialing string.  

**Call Forward**  

Tap to access Call Forward Settings screen.  

**Call Forward Settings**  

It is used to specify the Call Forward Type from 4 modes: Unconditional, Time Based, Others (Forward When busy and No Answer Forward).  

**Auto Answer**  

It is used to configure auto answer mode. If set to "Yes", the phone will automatically turn on the speaker phone to answer incoming calls after a short reminding beep. If set to "Enable Intercom/Paging", it will answer the call based on the SIP info header sent from the server/proxy. Default setting is No.  

**Table 6: Account Settings - SIP Settings Parameters**  

<table>
<thead>
<tr>
<th>Enable Session Expiration</th>
<th>Configures the relevant parameter in &quot;Session Expiration Settings&quot; option below. The default setting is &quot;No&quot;.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Session Expiration Settings</td>
<td>Configures the relevant session expiration parameters.</td>
</tr>
<tr>
<td>SIP Port</td>
<td>It is used to define the local SIP port used to listen and transmit. If enabled Random Port option on Advanced Settings screen, this option will be unavailable.</td>
</tr>
<tr>
<td>Transmission Protocol</td>
<td>It is used to configure the transmission protocol to transmit SIP info. Users could choose TCP/UDP/ TLS. The default is &quot;UDP&quot;.</td>
</tr>
<tr>
<td>Unregister Before New Registration</td>
<td>If set to &quot;Register All&quot;, the SIP contact header will use &quot;***&quot; to clear all SIP user’s registration information. If set to &quot;Do Not Register&quot;, the phone will not clear the current SIP user's info. The default is &quot;Unregister Single&quot;, that means do not cancel the SIP user's registration information.</td>
</tr>
<tr>
<td>Register Expiration (m)</td>
<td>Specifies the frequency (in minutes) in which the phone refreshes its registration with the specified registrar. The minimum value is 1 minute while the maximum is 64800 minutes (about 45 days).The default value is 60 minutes (1 hour).</td>
</tr>
</tbody>
</table>
**Only Accept SIP Requests from Known Servers**

Once enabled, only accept SIP request sent from known servers, the default setting is "Disable".

**Check SIP User ID for Incoming Invite**

Checks SIP User ID in the Request URI of incoming INVITE; if it doesn't match the base SIP User ID, the call will be rejected. Direct IP calling will also be disabled. Default is No.

**Enable 100rel**

Enables PRACK (Provisional Acknowledgment) method. PRACK improves the network reliability by adding an acknowledgement system to the provisional Responses (1xx). If it's enabled, it will respond to the 1xx response from the remote party. The default setting is "Disabled".

**Table 7: Session Expiration Settings Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Session Expiration (s)</strong></td>
<td>The SIP Session Timer extension that enables SIP sessions to be periodically &quot;refreshed&quot; via a SIP request (UPDATE, or re-INVITE). If there is no refresh of an UPDATE or re-INVITE message, the session will be terminated once the session interval expires. Session Expiration is the time (in seconds) where the session is considered timed out, provided no successful session refresh transaction occurs beforehand.</td>
</tr>
<tr>
<td><strong>Min-SE (s)</strong></td>
<td>The minimum session expiration (in seconds). The default value is 90 seconds.</td>
</tr>
<tr>
<td><strong>UAC Specify Refresher</strong></td>
<td>As a caller, select UAC to use the phone as the refresher; or select UAS to use the caller or proxy server as the refresher. If set to &quot;Omit&quot;, that means do not specify the refresh object. The default setting is &quot;Omit&quot;.</td>
</tr>
<tr>
<td><strong>UAS Specify Refresher</strong></td>
<td>As a callee, select UAC to use caller or proxy server as the refresher; or select UAS to use the phone as the refresher.</td>
</tr>
<tr>
<td><strong>Force INVITE</strong></td>
<td>The Session Timer can be refreshed using the INVITE method or the UPDATE method. Select &quot;Yes&quot; to use the INVITE method to refresh the session timer.</td>
</tr>
<tr>
<td><strong>Caller Request Timer</strong></td>
<td>If set to “Yes” and the remote party supports session timers, the phone will use a session timer when it makes outbound calls. The default setting is &quot;No&quot;.</td>
</tr>
<tr>
<td><strong>Callee Request Timer</strong></td>
<td>If set to &quot;Yes&quot; and the remote party supports session timers, the phone will use a session timer when it receives inbound calls. The default setting is &quot;No&quot;.</td>
</tr>
<tr>
<td><strong>Force Timer</strong></td>
<td>If Force Timer is set to &quot;Yes&quot;, the phone will use the session timer even if the remote party does not support this feature. If Force Timer is set to &quot;No&quot;, the phone will enable the session timer only when the remote party supports this feature. To turn off the session timer, set Caller Request Timer, Callee Request Time and Force Timer all to &quot;No&quot;.</td>
</tr>
</tbody>
</table>

**Table 8: Account Settings - Network Settings Parameters**
| **Proxy-Require** | A SIP Extension to notify the SIP server that the phone is behind a NAT/Firewall. Do not configure this parameter unless this feature is supported on the SIP server. |
| **Outbound Proxy** | Configures the IP address or Domain name of the Primary Outbound Proxy, Media Gateway, or Session Border Controller. |
| **Secondary Outbound Proxy** | Configures the IP address or Domain name of the Secondary Outbound Proxy, Media Gateway, or Session Border Controller. Secondary outbound proxy will be used when the primary outbound proxy fails. |
| **NAT Traversal** | Enables or disables the NAT traversal mechanism. The default setting is "Keep-alive".  
- If set to "STUN" and STUN server is configured, the phone will route according to the STUN server; If NAT type is Full Cone, Address-Restricted Cone or Port-Restricted Cone, the phone will try to use public IP addresses and port number in all the SIP&SDP messages.  
- The phone will send empty SDP packet to the SIP server periodically to keep the NAT port open if it is configured to be "Keep-alive".  
- Configure this to be "NAT NO" if an outbound proxy is used.  
- Configure this to be "UPnP" if the router supports UPnP.  
- If set to "Auto", the phone will try to use all traversal methods mentioned above until find the available one. |
| **DNS Mode** | Controls how the search appliance looks up IP addresses for hostnames. There are three modes: A Record, SRV, NAPTR/SRV. The default setting is "A Record". If the user wishes to locate the server by DNS SRV, the user may select "SRV" or "NATPTR/SRV". |

Table 9: Account Settings - Codec Settings Parameters

| **DTMF** | Users can choose different ringtones. Specifies the mechanism to transmit DTMF digits. There are 3 supported modes:  
- **In audio**: which means DTMF is combined in the audio signal (not very reliable with low-bit-rate codecs);  
- **RTP (RFC2833)**: permits to specify DTMF with RTP packet. Users could know the packet is DTMF in the RTP header as well as the type of DTMF;  
- **SIP INFO**: uses SIP INFO to carry DTMF. The defect of this mode is that it's easily to cause desynchronized of DTMF and media packet for the reason the SIP and RTP are transmitted respectively. Default settings is via "RFC2833". |
| **Preferred Vocoder** | Selects which codecs will be used on Wi-Fi, 2G, 3G and 4G  
Multiple vocoder types are supported on the phone (PCM, PCMA, OPUS, G722, G726_32, iLBC, G729 and GSM). The vocoders in the list is a higher preference. Users can configure vocoders in a preference list that is included with the same preference order in SDP message. |
H.264 Image Size | Configures different image size (720P, VGA, CIF, QVGA and QCIF) in different network environment. For Wi-Fi network, the default setting is VGA; For 2G/3G/4G mobile network, the default setting is QVGA.

Video Bit Rate | Configures different video bite rate in different network environment. It is recommended to increase the bit rate if the bandwidth is sufficient, and the video quality will be reduced if the bandwidth is not enough. For Wi-Fi network, the default setting is 512kbps; For 2G/3G/4G network, the default setting is 192kbps.

SDP Bandwidth Attribute | Select the SDP bandwidth attribute from "Standard"," Media Level"," Session Level" or "None".
- Standard: Use AS at the session level and TIAS at the media level.
- Media Level: Use AS at the media level. This is the default setting.
- Session Level: Use AS at the session level.
- None: Don not change the format. Please do not change the format or it may cause decode failure if unclear about what format the server supports.

H.264 Payload Type | Configures the H.264 codec payload type. The valid range is from 96 to 127. The default value is 99.

SRTP Mode | Configures the SRTP Mode, when set to "Enable and Force" it will enable and force to use SRTP and when set to: "Enable but Not Force", it will enable but not force to use SRTP. The default setting is "Disable".

Enable SRTP Key Life Time | It is used to configure whether to enable SRTP key life time. If enabled, the RTP packets received and sent during the call cannot exceed 231. The default setting is "Yes".

**Advanced Settings**

Advanced Settings include General Settings, Call Settings, Network Settings and Additional Settings.

**General Settings**

<table>
<thead>
<tr>
<th>Table 10: Advanced Settings - General Settings Parameters</th>
</tr>
</thead>
<tbody>

<td>----------------------------------------------</td>
</tr>
<tr>
<td>Always use default account when dialing from native dialer</td>
</tr>
<tr>
<td>Local RTP Port</td>
</tr>
</tbody>
</table>
| Random Port                                 | Forces GS wave to use random ports for both SIP and RTP messages. This is usually necessary when multiple phones are behind the same full cone NAT. The default setting is "No".                                                                                      

**Note:** This parameter must be set to "No" for Direct IP Calling to work. |

**Call Settings**

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Filter Characters</td>
<td>Sets the characters for filter when dial out numbers. Users could set up multiple characters. For example, if set to &quot;[()-]&quot;, when dial (0571)-8800-8888, the character &quot;()-&quot; will be automatically filtered and dial 057188008888 directly. Note: The space also can be used, and it will be automatically filtered. The default value is &quot;[()-]&quot;.</td>
</tr>
<tr>
<td>DND</td>
<td>Enable/Disable the DND feature</td>

### BLF

BLF List

<table>
<thead>
<tr>
<th>BLF</th>
<th>Configures whether to enable contacts status detection in BLF list. The status will be shown under SIP option of the Contacts.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Add the contacts to monitor its BLF status online in BLF list. The status will be shown in SIP option of the Contacts.</td>
</tr>
</tbody>
</table>

#### Status Indicators

- **Offline.** Unable to detect the contact status, or the contact’s registration is failed.
- **Busy.** The active line of the contact is busy.
- **Online.** The call line is in idle.

**Note:** The BLF function requires that the server supports BLF feature.

![BLF List Screen](image)
**LDAP Lookup When Dialing**
Defines whether to search LDAP when dialing. Default setting is "Yes".

**LDAP Lookup When Incoming Call**
Defines to search LDAP when there is an incoming call. The default setting is "Yes".

**Server Address**
Configures the LDAP server URL or IP address.

**Port**
Configures the LDAP server port. The default value is 389.

**Base DN**
Configures the base DN which is the root directory of the LDAP server, it means under which directory to search contact.

**Username (Binding DN)**
Specifies the username to access the LDAP server.

**Password**
Fill in the password to access the LDAP server.

**LDAP Name Attributes**
Specifies the "name" attributes of each record which are returned in the LDAP search result.

**Example:**
- gn
- cn sn description

---

CONNECTING GS WAVE WITH GDS3710 DOOR SYSTEM

The GS Wave can interact with the GDS3710 Door System to allows users to open door, initiate call to the GDS3710 and gets a real-time audio / video stream.

For more details about GDS3710, please refer to GDS3710 Web page.

The following steps illustrate how to configure GDS3710 settings on the GS Wave assuming that the GS Wave and GDS SIP extension are correctly registered.

1. Configure your SIP extension on the GS Wave using the same SIP server on which the GDS extension is registered.
3. Click on “Add New Item” and configure your GDS settings:
   - **GDS Name**: Specifies the name to identify the GDS3710.
   - **GDS Number**: Specifies the SIP extension number of the GDS3710
   - **GDS Password**: Configure the remote PIN code used on the GDS available under GDS3710 web GUI -> Door System Settings -> Basic Settings -> Remote PIN to open the door.
4. Press on ✓ to save the new GDS settings and add the new item as displayed below.

   **Note**: The GS Wave supports up 10 GDS3710 door systems.

5. Access to GDS Web GUI to configure the number called when the doorbell button is pressed under System Settings -> Basic settings -> “Number Called When Door Bell Pressed” as displayed on the following screenshot, and configure the remote PIN code if available.
6. Save and apply the new settings and then when someone presses the doorbell button on the GDS3710, it will initiate a video call to GS Wave extension, once accepting the incoming call, the users can open the door by pressing "OpenDoor" button as displayed on the following screenshots.
