DOCUMENT PURPOSE

This document describes the basic concept and tasks necessary to use and configure your HT801/HT802. And it covers the topic of connecting and configuring the HT801/HT802, making basic operations and the call features. Please visit <http://www.grandstream.com/support> to download the latest “HT801/HT802 User Guide”.

This guide covers following topics:

- [Product overview.](#)
- [Getting started.](#)
- [Configuration guide.](#)
- [Call features.](#)
- [Call operations.](#)
- [Upgrading and provisioning.](#)
- [Restore factory default settings.](#)

CHANGE LOG

This section documents significant changes from previous versions of user guide for HT801/HT802. Only major new features or major document updates are listed here. Minor updates for corrections or editing are not documented here.

Firmware Version 1.0.3.7

- No major changes.

Firmware Version 1.0.3.2

- No major changes.

Firmware Version 1.0.2.7

- No major changes.

Firmware Version 1.0.2.5

- No major changes.

Firmware Version 1.0.2.3

- No major changes.

Firmware Version 1.0.1.9

- This is the initial version for HT802.

WELCOME

The HT801/HT802 analog telephone adaptors provide transparent connectivity for analog phones and faxes to the world of internet voice. Connecting to any analog phone, fax or PBX, the HT801/HT802 are an effective and flexible solution for accessing internet-based telephone services and corporate intranet systems across established LAN and internet connections. The Grandstream handy tones HT801/HT802 are new additions to the popular handy tone ATA product family. This manual will help you learn how to operate and manage your HT801/HT802 analog telephone adaptor and make the best use of its many upgraded features including simple and quick installation, 3-way conferencing, direct IP-IP Calling, and new provisioning support among other features. The HT801/HT802 are very easy to manage and configure, and are specifically designed to be an easy to use and affordable VoIP solution for both the residential user and the teleworker.

PRODUCT OVERVIEW

The HT801 is a one-port analog telephone adapter (ATA) while the HT802 is a 2-port analog telephone adapter (ATA) that allows users to create a high-quality and manageable IP telephony solution for residential and office environments. Its ultra-compact size, voice quality, advanced VoIP functionality, security protection and auto provisioning options enable users to take advantage of VoIP on analog phones and enables service providers to offer high quality IP service. The HT801/HT802 are an ideal ATA for individual use and for large scale commercial IP voice deployments.

Feature Highlights

The following table contains major features of HT801 and HT802:

Table 1: HT801/HT802 Features at a Glance

<p>HT801</p> 	<ul style="list-style-type: none"> • 1 SIP profile through 1 FXS port on HT801, 2 SIP profiles through 2 FXS ports on HT802 and single 10/100Mbps port on both models. • 3-way voice conferencing. • Wide range of caller ID formats. • Advanced telephony features, including call transfer, call forward, call-waiting, do not disturb, message waiting indication, multi-language prompts, flexible dial plan and more.
<p>HT802</p> 	<ul style="list-style-type: none"> • T.38 Fax for creating Fax-over-IP and GR-909 Line Testing Functionalities. • TLS and SRTP security encryption technology to protect calls and accounts. • Automated provisioning options include TR-069 and XML config files. • Failover SIP server automatically switches to secondary server if main server loses connection. • Use with Grandstream's UCM series of IP PBXs for Zero Configuration provisioning.

HT802 Technical Specifications

The following table resume all the technical specifications including the protocols / standards supported, voice codecs, telephony features, languages and Upgrade/ Provisioning settings for the HT801/HT802.

Table 2: HT801/HT802 FXS Analog Telephone Adapter Technical Specifications

Interfaces		
	HT801	HT802
Telephone Interfaces	One (1) RJ11 FXS port	Two (2) RJ11 FXS ports.
Network Interface	One (1) 10/100Mbps auto-sensing Ethernet port (RJ45).	
LED Indicators	POWER, INTERNET, PHONE	POWER, INTERNET, PHONE1, PHONE2.
Factory Reset Button	Yes.	
Voice, Fax, Modem		
	HT801	HT802
Telephony Features	Caller ID display or block, call waiting, flash, blind or attended transfer, forward, hold, do not disturb, 3-way conference.	
Voice Codecs	G.711 with Annex I (PLC) and Annex II (VAD/CNG), G.723.1, G.729A/B, G.726, iLBC, OPUS, dynamic jitter buffer, advanced line echo cancellation.	
Fax over IP	T.38 compliant Group 3 Fax Relay up to 14.4kpbs and auto-switch to G.711 for Fax Pass-through.	
Short/Long Haul Ring Load	2 REN: Up to 1km on 24 AWG.	
Caller ID	Bellcore Type 1 & 2, ETSI, BT, NTT, and DTMF-based CID.	
Disconnect Methods	Busy Tone, Polarity Reversal/Wink, Loop Current.	
Signaling		
	HT801	HT802
Network Protocols	TCP/IP/UDP, RTP/RTCP, HTTP/HTTPS, ARP/RARP, ICMP, DNS, DHCP, NTP, TFTP, SSH, STUN, SIP (RFC3261), SIP over TCP/TLS, SRTP, TR-069.	
QoS	Layer 3 (ToS, DiffServ, MPLS).	
DTMF Methods	In-audio, RFC2833 and/or SIP INFO.	
Provisioning and Control	HTTP, HTTPS, SSH, TFTP, TR-069, secure and automated provisioning using AES encryption, syslog.	
Security		
	HT801	HT802
Media	SRTP.	
Control	TLS/SIPS/HTTPS/SSH.	
Management	Syslog support, SSH, remote management using web browser.	
Physical		
	HT801	HT802
Universal Power Supply	Input: 100-240VAC, 50-60Hz. Output: 5.0VDC/1.0A.	

Environmental	Operational: 32° – 104°F or 0° – 40°C. Storage: 14° – 140°F or -10° – 60°C. Humidity: 10 – 90% Non-condensing.	
Dimensions and Weight	<ul style="list-style-type: none"> • 100mm x 100mm x 29.5mm • 102g 	<ul style="list-style-type: none"> • 100mm x 100mm x 29.5mm • 114g (without package).

Compliance	FCC Part15B EN55032, EN55024, EN61000-3-2, EN61000-3-3, EN60950-1, AS/NZS CISPR22, AS/NZS60950.1, S003	FCC 15B, AS/NZS CISPR22, AS/NZS60950, EN55022, EN55024, EN60950, EN61000-3-2, EN61000-3-3, UL (Power supply).

GETTING STARTED

This chapter provides basic installation instructions including the list of the packaging contents and information for obtaining the best performance with the HT801/HT802.

Equipment Packaging

The HT801 ATA package contains:

Figure 1: HT801 Package Contents

The HT802 ATA package contains:

Figure 2: HT802 Package Contents

Note: Check the package before installation. If you find anything missing, contact your system administrator.

HT801/HT802 Ports Description

The following figure describes the different ports on the back panel of the HT801.

Figure 3: HT801 Back Panel

The following figure describes the different ports on the back panel of the HT802.

Figure 4: HT802 Back Panel

Table 3: Definition of the HT801/HT802 Connectors

Phone for HT801 Phone 1 & 2 for HT802	Used to connect the analog phones / fax machines to the phone adapter using an RJ-11 telephone cable.
Internet port	Used to connect the phone adapter to your router or gateway using an Ethernet RJ45 network cable.
Micro USB Power	Connects the phone adapter to PSU (5V – 1A).
Reset	Factory reset button, press for 7 seconds to reset factory default settings.

Connecting HT801/HT802

The HT801 and HT802 are designed for easy configuration and easy installation, to connect your HT801 or HT802, please follow the steps above:

1. Insert a standard RJ11 telephone cable into the phone port and connect the other end of the telephone cable to a standard touch-tone analog telephone.
2. Insert the Ethernet cable into the internet or LAN port of the HT801/ht802 and connect the other end of the Ethernet cable to an uplink port (a router or a modem, etc.)
3. Insert the power adapter into the HT801/HT802 and connect it to a wall outlet.

Power, Ethernet and Phone LEDs will be solidly lit when the HT801/HT802 is ready for use.

Figure 5: Connecting the HT801/HT802

HT801/HT802 LEDs Pattern

There are 3 LED buttons on HT801 and 4 LED buttons on HT802 that help you manage the status of your Handy Tone.

Figure 6: HT801/HT802 LEDs Pattern

Table 4: HT801/HT802 LEDs Pattern Description

LED Lights	Status
Power LED 	The Power LED lights up when the HT801/HT802 is powered on and it flashes when the HT801/HT802 is booting up.
Internet LED 	The Ethernet LED lights up when the HT801/HT802 is connected to your network through the Ethernet port and it flashes when there is data being sent or received.
Phone LED for HT801  Phone LED 1&2 for HT802  	The phone LED 1 & 2 indicates status of the respective FXS Ports-phone on the back panel <ul style="list-style-type: none"> • OFF - Unregistered • ON (Solid Blue) - Registered and Available • Blinking every second - Off-Hook / Busy • Slow blinking - FXS LEDs indicates voicemail

CONFIGURATION GUIDE

The HT801/HT802 can be configured via one of two ways:

- The IVR voice prompt menu.
- The Web GUI embedded on the HT801/HT802 using PC's web browser.

Obtain HT801/HT802 IP Address via Connected Analogue Phone

HT801/HT802 is by default configured to obtain the IP address from DHCP server where the unit is located. To know which IP address is assigned to your HT801/HT802, you should access to the "[Interactive Voice Response Menu](#)" of your adapter via the connected phone and check its IP address mode.

Please refer to the steps below to access the interactive voice response menu:

1. Use a telephone connected to phone for the HT801 or phone 1 or phone 2 ports of your HT802.
2. Press *** (press the star key three times) to access the IVR menu and wait until you hear "Enter the menu option".
3. Press 02 and the current IP address will be announced.

Understanding HT801/HT802 Interactive Voice Prompt Response Menu

The HT801/HT802 has a built-in voice prompt menu for simple device configuration which lists actions, commands, menu choices, and descriptions. The IVR menu work with any phone connected to the HT801/HT802. Pick up the handset and dial "****" to use the IVR menu.

Table 5: Voice Prompt Menu

Menu	Voice Prompt	Options
Main Menu	"Enter a Menu Option"	Press "*" for the next menu option Press "#" to return to the main menu Enter 01-05, 07,10, 13-17,47 or 99 menu options
01	"DHCP Mode", "Static IP Mode"	Press "9" to toggle the selection If using "Static IP Mode", configure the IP address information using menus 02 to 05. If using "Dynamic IP Mode", all IP address information comes from the DHCP server automatically after reboot.
02	"IP Address " + IP address	The current WAN IP address is announced If using "Static IP Mode", enter 12 digit new IP address. You need to reboot the HT801/HT802 for the new IP address to take Effect.

03	“Subnet “ + IP address	Same as menu 02
04	“Gateway “ + IP address	Same as menu 02
05	“DNS Server “ + IP address	Same as menu 02
07	Preferred Vocoder	Press “9” to move to the next selection in the list: <ul style="list-style-type: none"> • PCM U / PCM A • iLBC • G-726 • G-723 • G-729 • OPUS
10	“MAC Address”	Announces the Mac address of the unit.
13	Firmware Server IP Address	Announces current Firmware Server IP address. Enter 12 digit new IP address.
14	Configuration Server IP Address	Announces current Config Server Path IP address. Enter 12 digit new IP address.
15	Upgrade Protocol	Upgrade protocol for firmware and configuration update. Press “9” to toggle between TFTP / HTTP / HTTPS
16	Firmware Version	Firmware version information.
17	Firmware Upgrade	Firmware upgrade mode. Press “9” to toggle among the following three options: <ul style="list-style-type: none"> • always check • check when pre/suffix changes • never upgrade
47	“Direct IP Calling”	Enter the target IP address to make a direct IP call, after dial tone. (See “ <i>Make a Direct IP Call</i> ”.)
86	Voice Mail	Access to your voice mails messages.
99	“RESET”	Press “9” to reboot the device Enter MAC address to restore factory default setting (See Restore Factory Default Setting section)
	“Invalid Entry”	Automatically returns to main menu
	“Device not registered”	This prompt will be played immediately after off hook If the device is not register and the option “Outgoing Call without Registration” is in NO

Five success tips when using the voice prompt

- “*” shifts down to the next menu option and “#” returns to the main menu.

- “9” functions as the ENTER key in many cases to confirm or toggle an option.
- All entered digit sequences have known lengths - 2 digits for menu option and 12 digits for IP address. For IP address, add 0 before the digits if the digits are less than 3 (i.e. - 192.168.0.26 should be key in like 192168000026. No decimal is needed).
- Key entry cannot be deleted but the phone may prompt error once it is detected.

Configuration via Web Browser

The HT801/HT802 embedded Web server responds to HTTP GET/POST requests. Embedded HTML pages allow a user to configure the HT801/HT802 through a web browser such as Google Chrome, Mozilla Firefox and Microsoft’s IE.

Accessing the Web UI

1. Connect the computer to the same network as your HT801/HT802.
2. Make sure the HT801/HT802 is booted up.
3. You may check your HT801/HT802 IP address using the IVR on the connected phone. Please see [Obtain HT802 IP Address Via Connected Analogue Phone.](#)
4. Open Web browser on your computer.
5. Enter the HT801/HT802’s IP address in the address bar of the browser.
6. Enter the administrator’s password to access the Web Configuration Menu.

Notes:

- The computer must be connected to the same sub-network as the HT801/HT802. This can be easily done by connecting the computer to the same hub or switch as the HT801/HT802.
- Recommended Web browsers:
 - **Microsoft Internet Explorer:** version 10 or higher.
 - **Google Chrome:** version 58.0.3 or higher.
 - **Mozilla Firefox:** version 53.0.2 or higher.
 - **Safari:** version 5.1.4 or higher.
 - **Opera:** version 44.0.2 or higher.

Web UI Access Level Management

There are two default passwords for the login page:

User Level	Password	Web Pages Allowed
End User Level	123	Only Status and Basic Settings
Administrator Level	admin	All pages

The password is case sensitive with maximum length of 25 characters.

When changing any settings, always submit them by pressing the **Update** or **Apply** button on the bottom of the page. After submitting the changes in all the Web GUI pages, reboot HT801/HT802 to have the changes take effect if necessary; most of the options under the **Advanced Settings** and **FXS Port (x)** pages require reboot.

Saving the Configuration Changes

After users makes changes to the configuration, pressing the **Update** button will save but not apply the changes until the **Apply** button is clicked. Users can instead directly press the **Apply** button. We recommend rebooting or powering cycle the phone after applying all the changes.

Changing Admin Level Password

1. Access your HT801/HT802 web UI by entering its IP address in your favorite browser (screenshots below are from HT802 but the same applies to HT801).
2. Enter your admin password (default: admin).
3. Press **Login** to access your settings and navigate to **Advanced Settings > Admin Password**.
4. Enter the new admin password.
5. Confirm the new admin password.
6. Press **Apply** at the bottom of the page to save your new settings.

The screenshot shows the 'Grandstream Device Configuration' web interface. At the top, there are navigation tabs: STATUS, BASIC SETTINGS, ADVANCED SETTINGS (highlighted with a red box), FXS PORT1, and FXS PORT2. Below the tabs, there are two input fields: 'New Admin Password:' and 'Confirm Admin Password:'. The 'New Admin Password:' field has a note '(purposely not displayed for security protection)'. Both input fields are highlighted with red boxes.

Figure 7: Admin Level Password

Changing User Level Password

1. Access your HT801/HT802 web UI by entering its IP address in your favorite browser.
2. Enter your admin password (default: admin).
3. Press **Login** to access your settings and navigate to **Basic Settings > End User Password**.
4. Enter the new user password.
5. Confirm the new end-user password.
6. Press **Apply** at the bottom of the page to save your new settings.

The screenshot shows the 'Grandstream Device Configuration' web interface. At the top, there are navigation tabs: STATUS, BASIC SETTINGS (highlighted with a red box), ADVANCED SETTINGS, FXS PORT1, and FXS PORT2. Below the tabs, there are two input fields: 'New End User Password:' and 'Confirm End User Password:'. The 'New End User Password:' field has a note '(purposely not displayed for security protection)'. Both input fields are highlighted with red boxes.

Figure 8: User Level Password

Changing HTTP Web Port

1. Access your HT801/HT802 web UI by entering its IP address in your favorite browser.
2. Enter your admin password (default: admin).
3. Press **Login** to access your settings and navigate to **Basic Settings > Web Port**.
4. Change the current port to your desired/new HTTP port. Ports accepted are in range [1-65535].
5. Press **Apply** at the bottom of the page to save your new settings.

The screenshot shows the 'Grandstream Device Configuration' web interface. At the top, there are navigation tabs: STATUS, BASIC SETTINGS (highlighted with a red box), ADVANCED SETTINGS, FXS PORT1, and FXS PORT2. Below the tabs, there are two password input fields: 'New End User Password:' and 'Confirm End User Password:'. The 'New End User Password:' field has a note '(purposely not displayed for security protection)'. Under the heading 'Web/SSH Access:', there are radio buttons for 'Web Access Mode: HTTPS' and 'HTTP' (selected). Below this, there are two input fields: 'HTTP Web Port: 80 (default is 80)' (highlighted with a red box) and 'HTTPS Web Port: 443 (default is 443)'.

Figure 9: Web HTTP Port

NAT Settings

If you plan to keep the Handy Tone within a private network behind a firewall, we recommend using STUN Server. The following three settings are useful in the STUN Server scenario:

1. STUN Server (under advanced settings webpage) Enter a STUN server IP (or FQDN) that you may have, or look up a free public STUN Server on the internet and enter it on this field. If using Public IP, keep this field blank.
2. Use Random SIP/RTP Ports (under advanced settings webpage) This setting depends on your network settings. Generally, if you have multiple IP devices under the same network, it should be set to Yes. If using a public IP address, set this parameter to No.
3. NAT traversal (under the FXS web page) Set this to Yes when gateway is behind firewall on a private network.

DTMF Methods

The HT801/HT802 support the following DTMF mode:

- DTMF in-audio
- DTMF via RTP (RFC2833)
- DTMF via SIP INFO

Set priority of DTMF methods according to your preference. This setting should be based on your server DTMF setting.

Preferred Vocoder (Codec)

The HT801/HT802 supports following voice codecs. On FXS ports pages, choose the order of your favorite codecs:

- PCMU/A (or G711 μ /a)
- G729 A/B
- G723.1
- G726
- iLBC
- OPUS

Configuring the HT801/HT802 Through Voice Prompts

As mentioned previously, The HT801/HT802 has a built-in voice prompt menu for simple device configuration. Please refer to "[Understanding HT801/HT802 Interactive Voice Prompt Response Menu](#)" for more information about IVR and how to access its menu.

• DHCP MODE

Select voice menu option 01 to allow the HT801/HT802 to use DHCP.

• STATIC IP MODE

Select voice menu option 01 to allow the HT801/HT802 to enable the STATIC IP mode, then use option 02, 03, 04, 05 to set up IP address, Subnet Mask, Gateway and DNS server respectively.

• FIRMWARE SERVER IP ADDRESS

Select voice menu option 13 to configure the IP address of the firmware server.

• CONFIGURATION SERVER IP ADDRESS

Select voice menu option 14 to configure the IP address of the configuration server.

• UPGRADE PROTOCOL

Select the menu option 15 to choose firmware and configuration upgrade protocol between TFTP, HTTP and HTTPS.

• FIRMWARE UPGRADE MODE

Select voice menu option 17 to choose firmware upgrade mode among the following three options:

"Always check, check when pre/suffix changes, and never upgrade".

Register a SIP Account

The HT801 supports 1 FXS port which can be configured with 1 SIP account, while HT802 supports 2 FXS ports which can be configured with 2 SIP accounts . Please refer to the following steps to register your accounts via web user interface.

1. Access your HT801/HT802 web UI by entering its IP address in your favorite browser.
2. Enter your admin password (default: admin) and press **Login** to access your settings.
3. Go to **FXS Port (1 or 2)** pages.
4. In **FXS Port** tab, set the following:
 - a. **Account Active** to **Yes**.
 - b. **Primary SIP Server** field with your SIP server IP address or FQDN.
 - c. **Failover SIP Server** with your Failover SIP Server IP address or FQDN. Leave empty if not available.
 - d. **Prefer Primary SIP Server** to **No** or **Yes** depending on your configuration. Set to **No** if no Failover SIP Server is defined. If “**Yes**”, account will register to Primary SIP Server when failover registration expires.
 - e. **Outbound Proxy**: Set your Outbound Proxy IP Address or FQDN. Leave empty if not available.
 - f. **SIP User ID**: User account information, provided by VoIP service provider (ITSP). Usually in the form of digit like phone number or a phone number.
 - g. **Authenticate ID**: SIP service subscriber’s Authenticate ID used for authentication. Can be identical to or different from SIP User ID.
 - h. **Authenticate Password**: SIP service subscriber’s account password to register to SIP server of ITSP. For security reasons, the password will field will be shown as empty.
 - i. **Name**: Any name to identify this specific user.
5. Press **Apply** at the bottom of the page to save your configuration.

Grandstream Device Configuration

STATUS
BASIC SETTINGS
ADVANCED SETTINGS
FXS PORT1
FXS PORT2

Account Active: No Yes

Primary SIP Server: (e.g., sip.mycompany.com, or IP address)

Failover SIP Server: (Optional, used when primary server no response)

Prefer Primary SIP Server: No Yes (yes - will register to Primary Server if Failover registration expires)

Outbound Proxy: (e.g., proxy.myprovider.com, or IP address, if any)

Backup Outbound Proxy: (e.g., proxy.myprovider.com, or IP address, if any)

Prefer Primary Outbound Proxy: No Yes (yes - will reregister via Primary Outbound Proxy if registration expires)

Allow DHCP Option 120(override SIP server): No Yes

SIP Transport: UDP TCP TLS (default is UDP)

SIP URI Scheme When Using TLS: sip sips

Use Actual Ephemeral Port in Contact with TCP/TLS: No Yes

NAT Traversal: No Keep-Alive STUN UPnP

SIP User ID: (the user part of an SIP address)

Authenticate ID: (can be identical to or different from SIP User ID)

Authenticate Password: (purposely not displayed for security protection)

Name: (optional, e.g., John Doe)

Figure 10: SIP Accounts Settings

After applying your configuration, your account will register to your SIP Server, you can verify if it has been correctly registered with your SIP server from your HT801/HT802 web interface under **Status > Port Status > Registration** (If it displays **Registered**, it means that your account is fully registered, otherwise it will display **Not Registered** so in this case you must double check the settings or contact your provider).

FXS PORT2

MAC Address: 00:0B:82:8E:74:D1
IP Address: 192.168.6.81
Product Model: HT802
Hardware Version: V1.5A Part Number -- 9610003715A
Software Version: Program -- 1.0.3.7 Bootloader -- 1.0.3.5 Core -- 1.0.3.3 Base -- 1.0.3.5
 CPE -- 1.0.1.59
Software Status: Running Mem: 21396
System Up Time: 05:48:23 up 2:09
PPPoE Link Up: Disabled
NAT: Unknown NAT

Port Status:

Port	Hook	User ID	Registration
FXS 1	On Hook	2003	Registered
FXS 2	On Hook	2004	Not Registered

Port Options:

Port	DND	Forward	Busy Forward	Delayed Forward
FXS 1	No			
FXS 2	No			

Provision: Not running. Last status : Firmware server is not configured.
Core Dump: Clean
GR909: [Test Page](#)

All Rights Reserved Grandstream Networks, Inc. 2006-2017

Rebooting the HT801/HT802 from Remote

Press the “Reboot” button at the bottom of the configuration menu to reboot the ATA remotely. The web browser will then display a message window to confirm that reboot is underway. Wait 30 seconds to log in again.

CALL FEATURES

The HT801/HT802 support all the traditional and advanced telephony features.

Table 6: HT801/HT802 Call Features

Key	Call features
*02	Forcing a Codec (per call) *027110 (PCMU), *027111 (PCMA), *02723 (G723), *02729 (G729), *027201 (iLBC).
*03	Disable LEC (per call) Dial “*03” +” number”. No dial tone is played in the middle.
*16	Enable SRTP.
*17	Disable SRTP.
*30	Block Caller ID (for all subsequent calls).
*31	Send Caller ID (for all subsequent calls).
*47	Direct IP Calling. Dial “*47” + “IP address”. No dial tone is played in the middle.
*50	Disable Call Waiting (for all subsequent calls).
*51	Enable Call Waiting (for all subsequent calls).
*67	Block Caller ID (per call). Dial “*67” +” number”. No dial tone is played in the middle.
*82	Send Caller ID (per call). Dial “*67” +” number”. No dial tone is played in the middle.
*69	Call Return Service: Dial *69 and the phone will dial the last incoming phone number received.
*70	Disable Call Waiting (per call). Dial “*70” +” number”. No dial tone is played in the middle.
*71	Enable Call Waiting (per call). Dial “*71” +” number”. No dial tone is played in the middle.
*72	Unconditional Call Forward: Dial “*72” and then the forwarding number followed by “#”. Wait for dial tone and hang up. (Dial tone indicates successful forward)

*73	Cancel Unconditional Call Forward. To cancel “Unconditional Call Forward”, dial “*73”, wait for dial tone, then hang up.
*74	Enable Paging Call: Dial “*74” and then the destination phone number you want to page.
*78	Enable Do Not Disturb (DND): When enabled all incoming calls are rejected.
*79	Disable Do Not Disturb (DND): When disabled, incoming calls are accepted.
*87	Blind Transfer.
*90	Busy Call Forward: Dial “*90” and then the forwarding number followed by “#”. Wait for dial tone then hang up.
*91	Cancel Busy Call Forward. To cancel “Busy Call Forward”, dial “*91”, wait for dial tone, then hang up.
*92	Delayed Call Forward. Dial “*92” and then the forwarding number followed by “#”. Wait for dial tone then hang up.
*93	Cancel Delayed Call Forward. To cancel Delayed Call Forward, dial “*93”, wait for dial tone, then hang up.
Flash/ Hook	Toggles between active call and incoming call (call waiting tone). If not in conversation, flash/hook will switch to a new channel for a new call.
#	Pressing pound sign will serve as Re-Dial key.

CALL OPERATIONS

Placing a phone call

To make the outgoing calls using your HT801/HT802:

1. Pick up the handset of the connected phone;
2. Dial the number directly and wait for 4 seconds (Default “No Key Entry Timeout”); or
3. Dial the number directly and press # (Use # as dial key” must be configured in web configuration).

Examples:

1. Dial an extension directly on the same proxy, (e.g. 1008), and then press the # or wait for 4 seconds;
2. Dial an outside number (e.g. (626) 666-7890), first enter the prefix number (usually 1+ or international code) followed by the phone number. Press # or wait for 4 seconds. Check with your VoIP service provider for further details on prefix numbers.

Direct IP calls

Direct IP calling allows two parties, that is, a FXS Port with an analog phone and another VoIP Device, to talk to each other in an ad hoc fashion without a SIP proxy.

Elements necessary to completing a Direct IP Call:

- Both HT801/HT802 and other VoIP Device, have public IP addresses, or
- Both HT801/HT802 and other VoIP Device are on the same LAN using private IP addresses, or
- Both HT801/HT802 and other VoIP Device can be connected through a router using public or private IP addresses (with necessary port forwarding or DMZ).

The HT801/HT802 supports two ways to make Direct IP Calling:

Using IVR

1. Pick up the analog phone then access the voice menu prompt by dialing “****”;
2. Dial “47” to access the direct IP call menu;
3. Enter the IP address after the dial tone and voice prompt “Direct IP Calling”.

Using Star Code

1. Pick up the analog phone then dial “*47”;
2. Enter the target IP address.

Note: No dial tone will be played between step 1 and 2 and destination ports can be specified using “*” (encoding for “:”) followed by the port number.

Examples of Direct IP Calls:

a) If the target IP address is 192.168.0.160, the dialing convention is ***47 or Voice Prompt with option 47, then 192*168*0*160**, followed by pressing the “#” key if it is configured as a send key or wait 4 seconds.

In this case, the default destination port 5060 is used if no port is specified;

b) If the target IP address/port is 192.168.1.20:5062, then the dialing convention would be: ***47 or Voice Prompt with option 47, then 192*168*0*160*5062** followed by pressing the “#” key if it is configured as a send key or wait for 4 seconds.

Note: When completing direct IP call, the “**Use Random SIP/RTP Port**” should be set to “NO”.

Call Hold

You can place a call on hold by pressing the “flash” button on the analog phone (if the phone has that button).

Press the “flash” button again to release the previously held Caller and resume conversation. If no “flash” button is available, use “hook flash” (toggle on-off hook quickly). You may drop a call using hook flash.

Call Waiting

The call waiting tone (3 short beeps) indicates an incoming call, if the call waiting feature is enabled.

To toggle between incoming call and current call, you need to press the “flash” button the first call is placed on hold.

Press the “flash” button to toggle between the active calls.

Call Transfer

Blind Transfer

Assume that the call is established between phone A and B are in conversation. The phone A wants to *blind transfer* phone B to phone C:

1. On the phone A presses FLASH to hear the dial tone.
2. The phone A dials *87 then dials caller C’s number, and then # (or wait for 4 seconds).
3. The phone A will hear the dial tone. Then, A can hang up.

Note: “Enable Call Feature” must be set to “Yes” in web configuration page.

Attended Transfer

Assume that the call is established between phone A and B are in conversation. The phone A wants to *attend transfer* phone B to phone C:

1. On the phone A presses FLASH to hear the dial tone.
2. Phone A dials the phone C's number followed by # (or wait for 4 seconds).
3. If phone C answers the call, phones A and C are in conversation. Then A can hang up to complete transfer.
4. If phone C does not answer the call, phone A can press "flash" to resume call with phone B.

Note: When attended transfer fails and A hangs up, the HT801/HT802 will ring back user A to remind A that B is still on the call. A can pick up the phone to resume conversation with B.

3-Way Conferencing

The HT801/HT802 supports Bellcore style 3-way Conference. To perform the 3-way conference, we assume that the call is established between phone A and B are in conversation. Phone A(HT801/HT802) wants to bring third phone C into conference:

1. Phone A presses FLASH (on the analog phone, or Hook Flash for old model phones) to get a dial tone.
2. Phone A dials C's number then # (or wait for 4 seconds).
3. If phone C answers the call, then A presses FLASH to bring B, C in the conference.
4. If phone C does not answer the call, phone A can press FLASH back to talk to phone B.
5. If phone A presses FLASH during conference, the phone C will be dropped out.
6. If phone A hangs up, the conference will be terminated for all three parties when configuration "Transfer on Conference Hang up" is set to "No". If the configuration is set to "Yes", A will transfer B to C so that B and C can continue the conversation.

Call Return

To call back to the latest incoming number.

1. Pick up the handset of the connected phone (Off-hook).
2. After hearing the dial tone, input "*69", and follow by "#" or wait for time out.
3. Your phone will automatically call back to the latest incoming number.

Note: All star code (*XX) related features mentioned above are supported by ATA default settings. If your service provider provides different feature codes, please contact them for instructions.

RESTORE FACTORY DEFAULT SETTINGS

 **Warning:**

Restoring the Factory Default Settings will delete all configuration information on the phone. Please backup or print all the settings before you restore to the factory default settings. Grandstream is not responsible for restoring lost parameters and cannot connect your device to your VoIP service provider.

There are three (3) methods for resetting your unit:

Using the Reset Button

To reset default factory settings using the reset button please follow the steps above:

1. Unplug the Ethernet cable.
2. Locate the reset hole on the back panel of your HT801/HT802.
3. Insert a pin in this hole, and press for about 7 seconds.
4. Take out the pin. All unit settings are restored to factory settings.

Using the IVR Command

Reset default factory settings using the IVR prompt:

1. Dial “****” for voice prompt.
2. Enter “99” and wait for “reset” voice prompt.
3. Enter the encoded MAC address (Look below on how to encode MAC address).
4. Wait 15 seconds and device will automatically reboot and restore factory settings.

Encode the MAC Address

1. Locate the MAC address of the device. It is the 12-digit HEX number on the bottom of the unit.
2. Key in the MAC address. Use the following mapping:

Table 7: MAC Address Key Mapping

Key	Mapping
0-9	0-9
A	22 (press the “2” key twice, “A” will show on the LCD)
B	222

C	2222
D	33 (press the “3” key twice, “D” will show on the LCD)
E	333
F	3333

For example: if the MAC address is 000b8200e395, it should be keyed in as “0002228200333395”.

EXPERIENCING HT801/HT802

Please visit our website: <http://www.grandstream.com> to receive the most up- to-date updates on firmware releases, additional features, FAQs, documentation and news on new products.

We encourage you to browse our [product related documentation](#), [FAQs](#) and [User and Developer Forum](#) for answers to your general questions. If you have purchased our products through a Grandstream Certified Partner or Reseller, please contact them directly for immediate support.

Our technical support staff is trained and ready to answer all of your questions. Contact a technical support member or [submit a trouble ticket online](#) to receive in-depth support.

Thank you again for purchasing Grandstream analogue telephone adapter, it will be sure to bring convenience to both your business and personal life.
