INTRODUCTION

CTI (Computer-Telephony Integration) provides ability to manage phone calls from a computer including basic call operations such as making and answering calls, and advanced call operations such as call forward, conference, call hold and more.

Grandstream DP750/720, GXP16XX, GXP17XX and GXP21XX series support CTI operations and commands providing complete control over phone calls from a desktop computer. CTI commands can be integrated with a 3rd party application to control interaction between customer's phone and desk computer or can be run using a web browser on customer's computer.

This guide describes available operations and commands with examples how-to run them from a web browser.

BENEFITS OF CTI

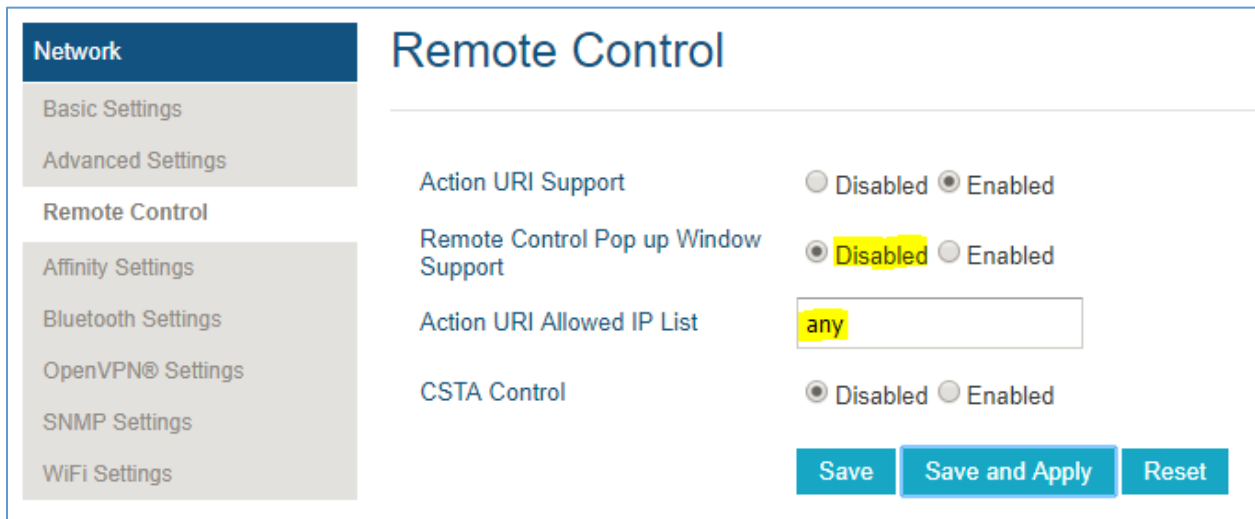

The major benefits of using Computer Telephony Integration (CTI) are the following:

- Complete control over calls (answer, hang-up, call on hold, manage “do not disturb”, call forward, conference, call transfer and etc...).
- Incoming calls notifications on desk computer allowing caller numbers to be screened against a database to collect or provide more information related to caller.
- Initiate outbound calls from computer directly with possibility of automatic and pre-dial calls commonly used for telemarketing.
- Increase productivity and improve customer service.

ENABLING CTI FEATURE

To enable CTI feature on GXP21xx series, follow steps below:

1. Access GXP21xx web GUI as administrator.
2. Navigate to **Network** → **Remote Control**.
3. Enable **Action URI Support** by checking “Enabled”.
4. On field **Action URI Allowed IP List**, put the remote party's IP address. If the IP address is unknown, add "any".
5. Set **Remote Control Pop up Window Support** to “Disabled” to allow remote control without confirmation on the physical phone.
6. Press Save and Apply button.
