OVERVIEW

The **Device Configuration** page allows users to create templates that can be used to provision devices of the same model or in the same group.

By Model/By Group Functions:

	By Model	By Group
Overview	<p>1. The user can set multiple templates for a single model by different sites.</p>  <p>2. For all sites in the GDMS account, each model only has one template.</p> 	<p>The user can separate the same series devices (different models) to the same group and create one template for the group.</p> 
Push Configuration Mechanism	<p>Model Y</p> <ul style="list-style-type: none"> Auto Push: When the device is added into GDMS platform, the model template will be provisioned into the device automatically. Manual Push: Select to provision the devices manually. 	<ul style="list-style-type: none"> No Auto Push Function Manual Push: Select to provision all devices in all sites or select the specific devices for provisioning. The user can also push the template to the device which is not in the current group.
Configured Parameters	All configuration parameters in this model (including special parameters in this model)	The configuration parameters supported in the current series (excluding the special parameters for the model)
Template Amount Limitation	No Limitation	No Limitation
Scenario	The user wants to configure the device with the latest configuration parameters. Once the device is online, it will obtain the latest configuration parameters.	The user only wants to provision the general configuration parameters to the same series devices. Users can create multiple group templates for one series.

BY MODEL

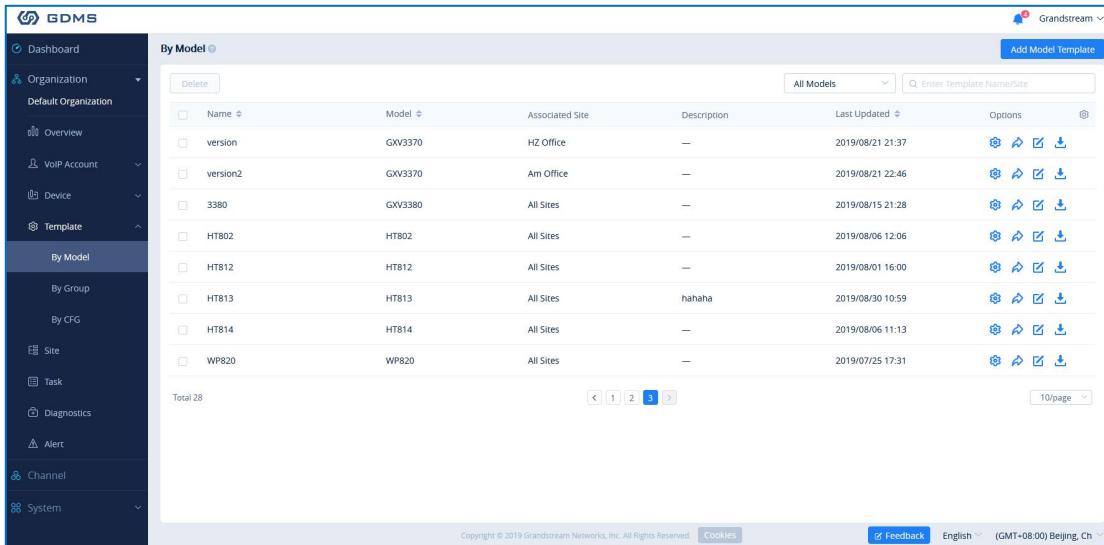

Users could customize the configuration template and classify the templates by device model and site. Users could also configure a batch of devices on the GDMS platform, which means users could create a configuration template for all same model of devices or create multiple templates for different sites.

Automatic Configuration Push

When a device is added to GDMS for the first time, it will automatically obtain and use the configuration template for its model.

Manual Configuration Push

To manually push the configuration to specific device models, click on the  button of the desired models.

The screenshot shows the GDMS interface with the 'Template' section selected. Under 'Template', the 'By Model' option is chosen. The main content area displays a table of configuration templates:

Name	Model	Associated Site	Description	Last Updated	Options		
version	GXV3370	H2 Office	—	2019/08/21 21:37			
version2	GXV3370	Am Office	—	2019/08/21 22:46			
3380	GXV3380	All Sites	—	2019/08/15 21:28			
HT802	HT802	All Sites	—	2019/08/06 12:06			
HT812	HT812	All Sites	—	2019/08/01 16:00			
HT813	HT813	All Sites	hahaha	2019/08/30 10:59			
HT814	HT814	All Sites	—	2019/08/06 11:13			
WP820	WP820	All Sites	—	2019/07/25 17:31

Figure 1: Manual Configuration Push

Note:

If a device's setting has not been modified in the **Device Management → Device → Set Parameters** page, GDMS will automatically update the device with the template settings created in the **Device Configuration** page.

Example:

For GXV3370 devices, all sites are using the same configuration template, and all the devices under the site A – D will acquire the same configuration template – GXV3370 Config Template.xml.

For DP720 devices, different sites have different configuration template. The DP720 in site A will

acquire the DP720 configuration file - Config Template -1.xml; the DP720 in site B will acquire the DP720 configuration file - Config Template -2.xml.

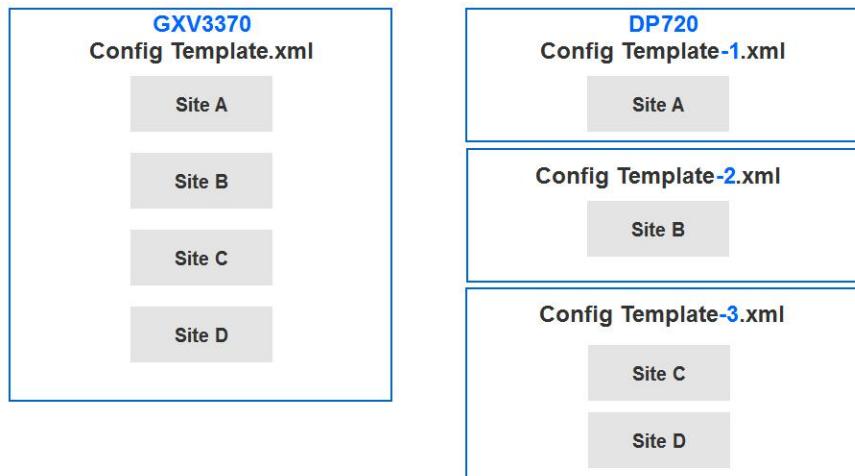

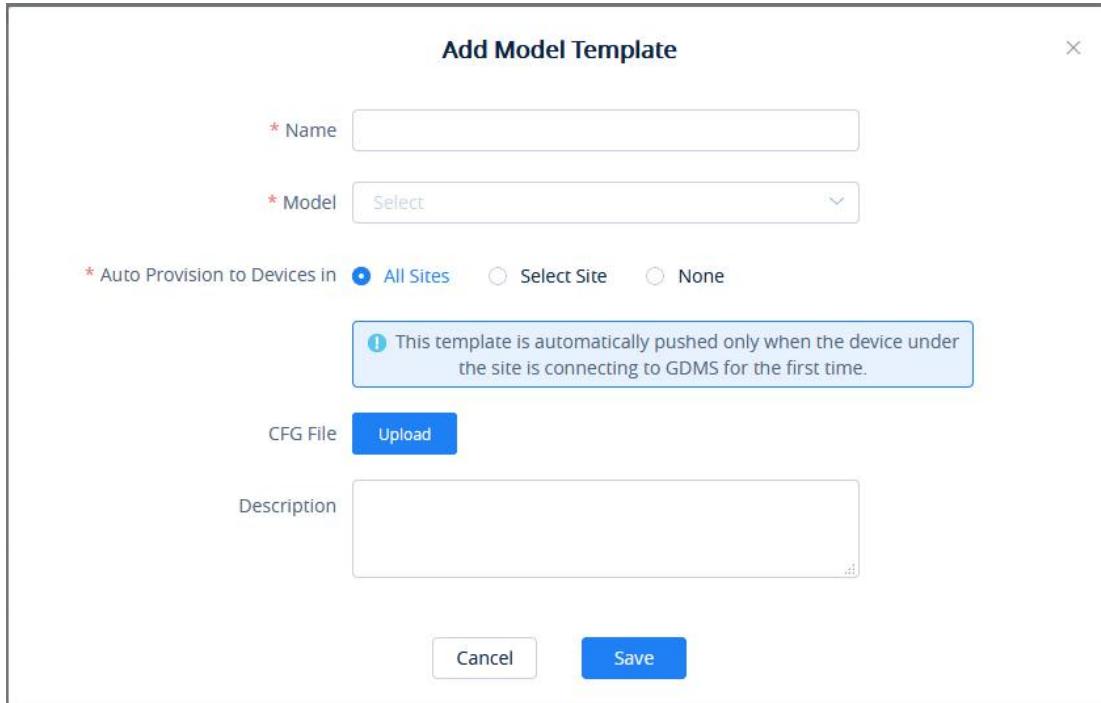

Figure 2: Example – GXV3370

Add Template

To add a configuration template for a specific device model, click on the **Add Template** button in the **By Model** page and enter the following information:

The screenshot shows the 'Add Model Template' dialog box with the following fields and options:

- Name:** Text input field.
- Model:** Select dropdown menu with 'Select' option.
- Auto Provision to Devices in:** Radio buttons for 'All Sites' (selected), 'Select Site', and 'None'.
- Note:** A callout box states: 'This template is automatically pushed only when the device under the site is connecting to GDMS for the first time.'
- CFG File:** 'Upload' button.
- Description:** Text area for additional notes.
- Buttons:** 'Cancel' and 'Save' at the bottom.

Figure 3: Add Template

Table 1: Add Template

Name	Enter the name of the template. This name must be unique and has a maximum character limit of 64.
-------------	--

Model	Select the device model of the template.
Select Site	<p>Select the site which the template will be used for.</p> <p>All Sites: All devices in all sites will use this template.</p> <p>Select Site: All devices in the selected sites will use this template. Multiple sites can be selected.</p> <p>None: GDMS platform will not allocate the template to any device. The user could allocate the template to the device manually.</p>
Description	Users could input the descriptions of the template and the purpose.

Once complete, users will be redirected to the **Set Parameters** page to modify the device settings of the template.

Notes:

- For the new associated device, when the device first time connects to the GDMS platform, it will acquire the configuration template according to the device model and site automatically. Users do not need to push the configuration template manually.
- Devices already on GDMS will not automatically obtain the settings from newly added configuration templates. Users will need to update these devices manually.

Important Note:

If the GDMS platform has the model configuration template for the current device, and the user does not modify the configuration parameters from the **Device Management → Device → Set Parameters** menu, the GDMS platform will push the default model configuration template to the device when the device is online. Otherwise, if the user updates the device configuration on “Set Parameters” menu on the GDMS platform and push to the device, the device will use this configuration as the default configuration.

Set Parameters

Users can configure model-specific settings when editing model templates.

- To configure these model-specific settings, click on the  of the desired template.

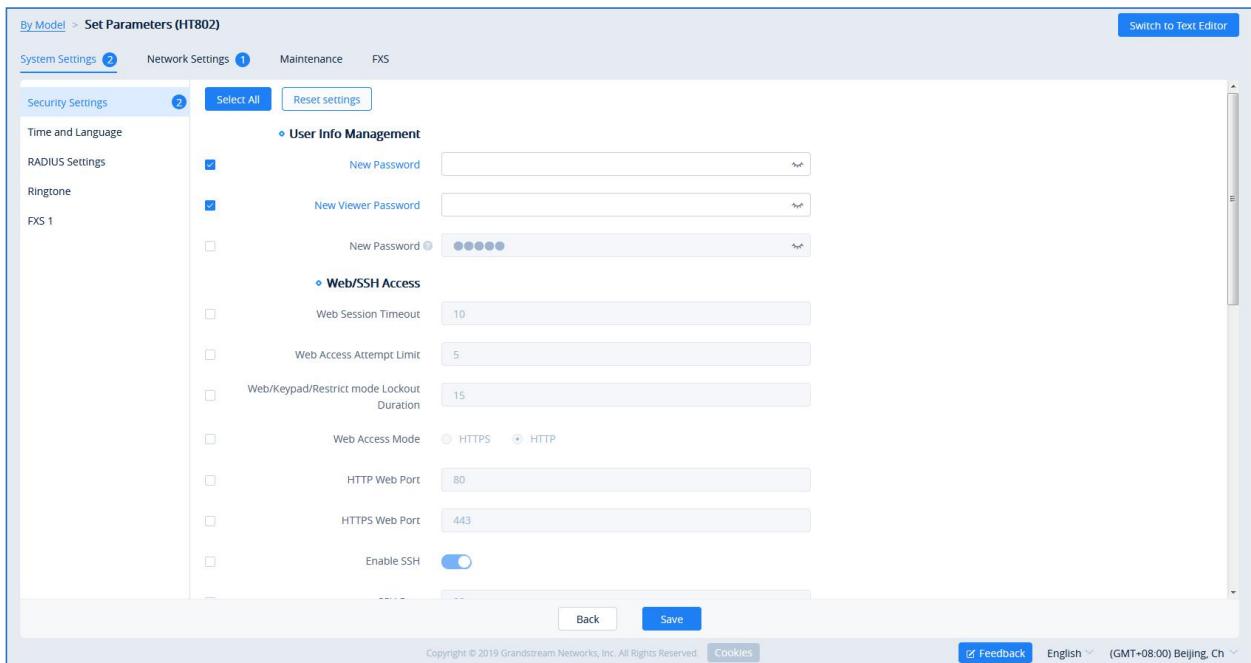

Figure 4: Set Parameters

- a. Clicking on the **Select All** button will select every option on the current page. Clicking on it again will deselect all the options.
- b. Clicking on the **Reset Settings** button will restore all settings on the current page to default values.
2. Modify the desired settings on the page or click on the **Switch To Text Editor** to configure device settings via text editing (i.e. p-values). Key can be either a P-value or an alias.

Notes:

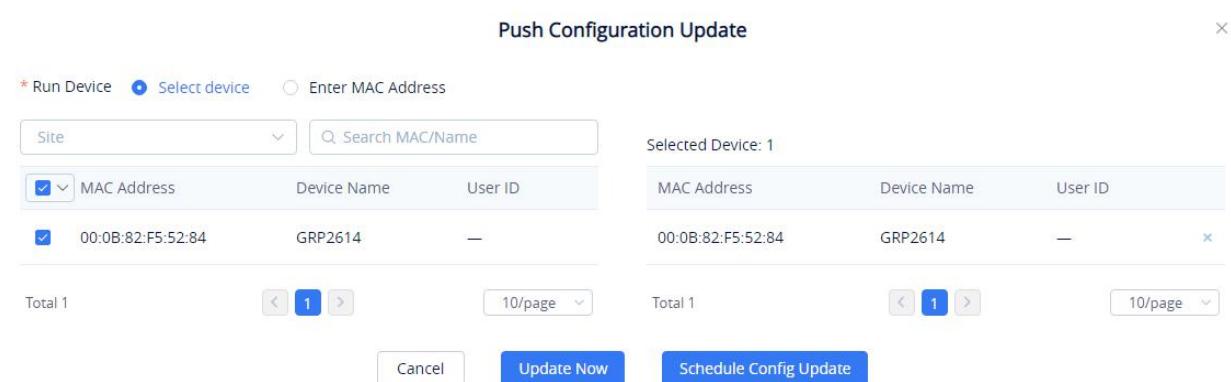

- The available settings for each model template are different. For more details on acceptable configuration values, please refer to the user guide for each device model.
- When the user adds a new model configuration template in GDMS platform, the GDMS platform will not push the template to the existing devices in the GDMS platform, and the GDMS platform will only push the new added template automatically to the new associated devices in the system.
- When the settings of a template are modified, the changes will not be automatically applied to related devices. Users will need to manually push the configuration to devices.
- For the new added devices, the devices will acquire the updated configuration template automatically.
- If a scheduled task involves a modified template, the task will use the template settings at the time of scheduling, not the newly modified settings.

Push Update

Users could push the configuration template to the device manually.

Select a specific configuration template, click on the button  following the template.

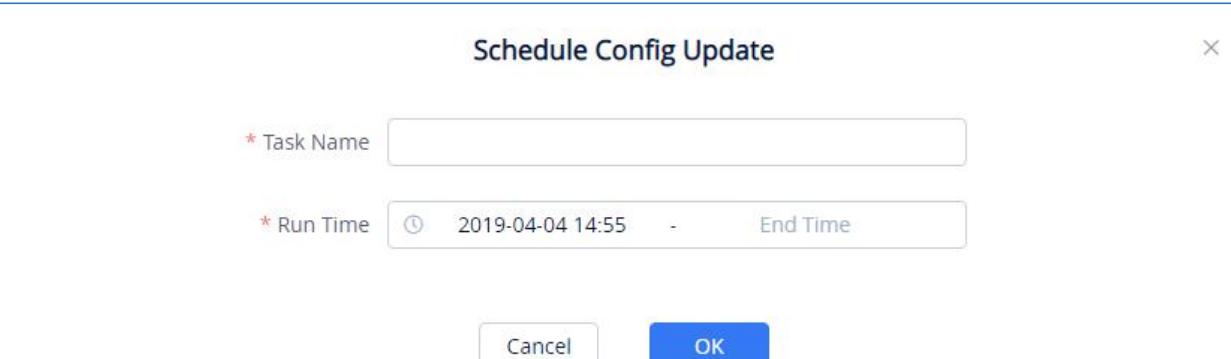

The screenshot shows the 'Push Configuration Update' dialog box. At the top, there are three radio buttons: 'Run Device' (red), 'Select device' (blue, selected), and 'Enter MAC Address' (grey). Below this is a dropdown menu 'Site' and a search bar 'Search MAC/Name'. The main area displays a table of devices:

MAC Address	Device Name	User ID
00:0B:82:F5:52:84	GRP2614	—

Below the table are two sets of pagination controls: 'Total 1' with pages 1-2 and '10/page', and 'Total 1' with pages 1-2 and '10/page'. At the bottom are three buttons: 'Cancel', 'Update Now' (highlighted in blue), and 'Schedule Config Update'.

Figure 5: Push Configuration File

1. Users could select any device in this device model to push the configuration template, the device will be updated with the configuration template.
2. Users can either push the configuration template immediately or schedule the configuration push for a specified time. If the latter is selected, users will need to enter a name and time for the scheduled push.

The screenshot shows the 'Schedule Config Update' dialog box. It has fields for 'Task Name' and 'Run Time' (set to 2019-04-04 14:55). At the bottom are 'Cancel' and 'OK' buttons, with 'OK' being highlighted in blue.

Figure 6: Schedule Config Update

3. Click on the **Save** button to finalize the task. Users can check the task status in the **Task Management** page.

Edit Template

To edit the configuration template's name, site, and description, click on the  button for the desired template.

Edit Model Template

This template is automatically pushed only when the device under the site is connected to GDMS for the first time.

* Name	<input type="text" value="GRP_template"/>
* Model	<input type="text" value="GRP2614"/>
* Auto Provision to Devices in	
<input checked="" type="radio"/> All Sites <input type="radio"/> Select Site <input type="radio"/> None	
Description	<input type="text"/>
<input type="button" value="Cancel"/> <input style="background-color: #0070C0; color: white; font-weight: bold;" type="button" value="Save"/>	

Figure 7: Edit Model Template

Download Configuration Template

To download the configuration template of a device model, click on the  button for the desired template.

<input type="checkbox"/> DP All	DP750	All Sites	test	2019/01/09 07:47	  
---------------------------------	-------	-----------	------	------------------	---

Figure 8: Download Configuration Template

Delete Template

To delete configuration templates from GDMS, select the desired templates and click on the **Delete** button in the top left corner of the **By Model** page.

Note:

If a scheduled task involves a deleted template, the task will still use a temporary copy of the template saved at the time of scheduling. A scheduled task will not fail due to deleted templates.

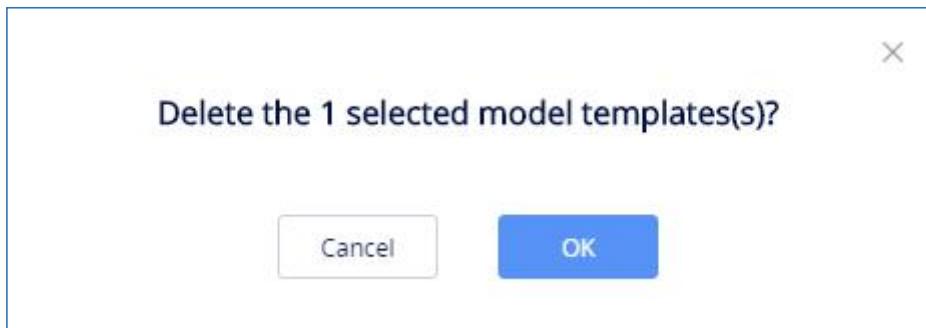

Figure 9: Delete Template

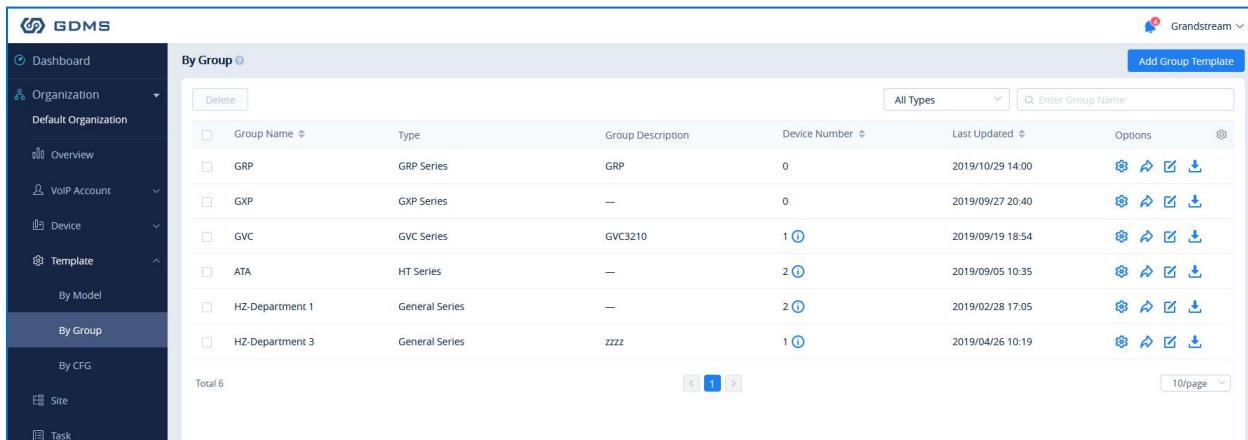

BY GROUP

Users could customize the configuration template by group. Users could configure a group and update the configuration template by group. For example, users could classify a batch of devices to a group and configure/manage the devices in the group. Users could push the configuration template to the group members on the GDMS platform.

Users could view the group configuration template, and the devices list in each group.

Users could modify the configuration parameters, push the configuration to the devices, edit the group and members, and download the configuration template by group.

The screenshot shows the GDMS interface with the 'By Group' section selected in the sidebar. The main area displays a table of device groups with columns for Group Name, Type, Group Description, Device Number, Last Updated, and Options. The table contains six entries:

Group Name	Type	Group Description	Device Number	Last Updated	Options
GRP	GRP Series	GRP	0	2019/10/29 14:00	
GXP	GXP Series	—	0	2019/09/27 20:40	
GVC	GVC Series	GVC3210	1	2019/09/19 18:54	
ATA	HT Series	—	2	2019/09/05 10:35	
HZ-Department 1	General Series	—	2	2019/02/28 17:05	
HZ-Department 3	General Series	zzzz	1	2019/04/26 10:19

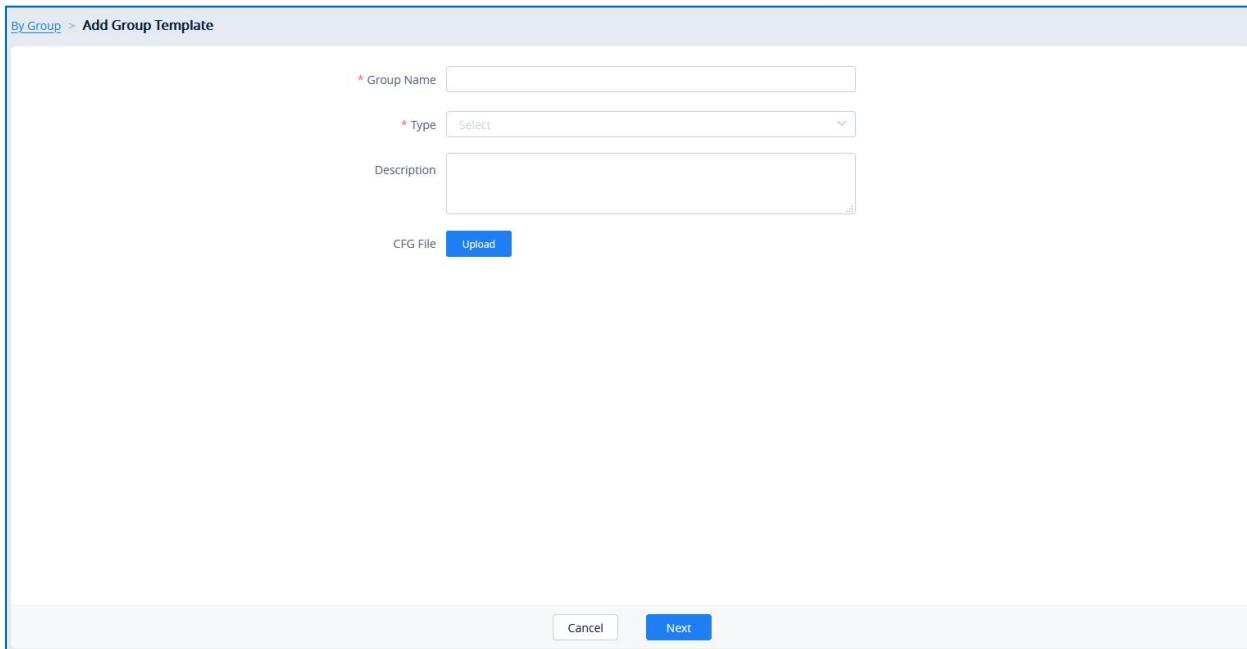

Figure 10: By Group

Add Group

Users could add a group at any time on the GDMS platform.

1. Click on the **Add Group** button at the top right of the **By Group** page.

The screenshot shows the 'Add Group Template' interface. At the top left is the breadcrumb 'By Group > Add Group Template'. Below it are four input fields: 'Group Name' (with a red asterisk), 'Type' (with a red asterisk and a dropdown menu showing 'Select'), 'Description' (with a text area), and 'CFG File' (with a 'Upload' button). At the bottom are 'Cancel' and 'Next' buttons.

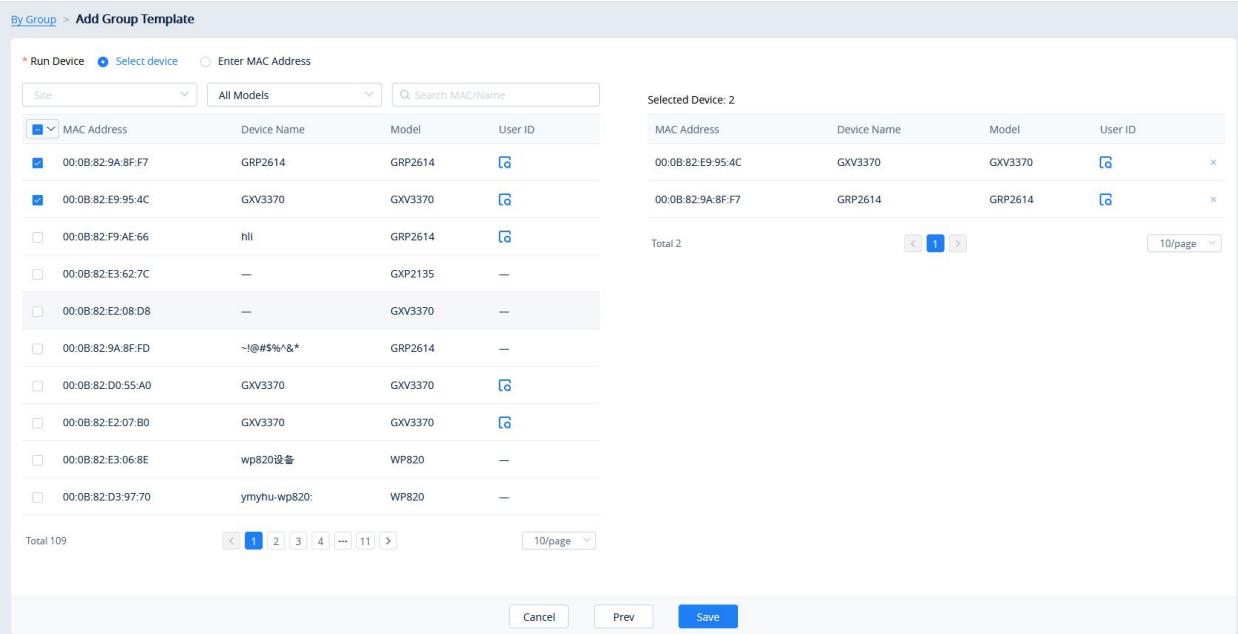

Figure 11: Add Group

Table 2: Add Group

Group Name	Enter the name of the group to easily identify it. Names must be unique and have a maximum character limit of 64.
Type	Users need select the type between DP series and Non-DP series: <ul style="list-style-type: none"> ● DP series: Use the configuration template for DP series. ● Non-DP series: Use the configuration template for GXV series, GRP series, GXP series, and WP series, and the configuration template includes all parameters in these products.
Description	Enter the detailed description and purpose of the configuration template.

2. Once complete, users will be redirected to the device selection page to add devices to the group. Users can either select devices from the list or manually enter the MAC addresses of the devices. Selected devices will be moved to the **Selected Device** list on the right of the page.

The screenshot shows the 'Add Group Template' page in the Grandstream GDMS interface. On the left, there's a search bar and a table listing devices by MAC Address, Device Name, Model, and User ID. Two devices are selected: '00:0B:82:E9:95:4C' (Device Name: GXV3370, Model: GXV3370) and '00:0B:82:9A:8F:F7' (Device Name: GRP2614, Model: GRP2614). On the right, a summary table shows the selected devices. At the bottom, there are navigation buttons for pages 1-11 and a 'Save' button.

Figure 12: Finish Adding Group

3. Users could click on “**Prev**” button to go back to the group configuration page to re-edit the group information.
4. Click on the **Save** button to complete group member selection. Users will then be redirected to **Set Parameters** page.

Note:

Users need to set the parameters of the configuration template for the newly added group.

Set Parameters

Users could set the unique parameters of the devices in the group in the configuration template in order to push the unique parameters to the devices in the group.

1. Select a specific group, click on the button  to access the group member parameters configuration page.
2. Modify the desired settings on the page or click on the Edit Configuration File to configure device settings via text editing (i.e. p-values). Key can be either a P-value or an alias.

Notes:

- The available settings for each model template are different. For more details on acceptable configuration values, please refer to the user guide for each device model.
- When the user adds a new model configuration template in GDMS platform, the GDMS

platform will not push the template to the existing devices in the GDMS platform, and the GDMS platform will only push the new added template automatically to the new associated devices in the system.

- When the settings of a template are modified, the changes will not be automatically applied to related devices. Users will need to manually push the configuration to devices.
- For the new added devices, the devices will acquire the updated configuration template automatically.
- If a scheduled task involves a modified template, the task will use the template settings at the time of scheduling, not the newly modified settings.

Push Update

Users could push the group configuration template to the device manually.

1. Click on the  button for the desired group.

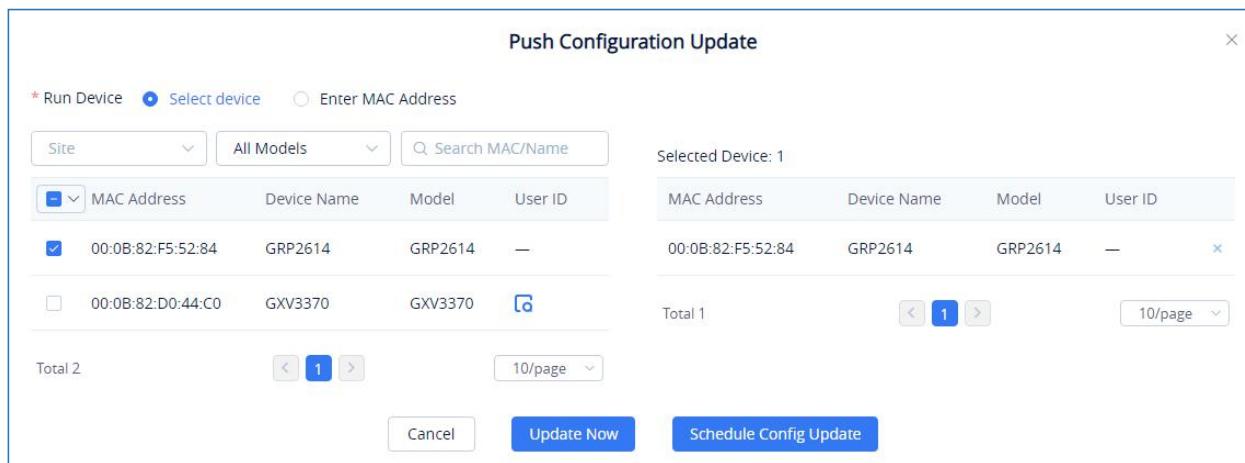

Figure 13: Push Update

2. In addition to being able to push the configuration template to all or select members of the group, users can also push it to non-members.
3. Users can either push the configuration template immediately or schedule the configuration push for a specified time. If the latter is selected, users will need to enter a name and time for the scheduled push.
4. Click on the **Save** button to finalize the task. Users can check the task status in the Task Management page.

Edit Group

Users could edit the group name, descriptions, and group members.

1. Click on the  button for the desired group.

Figure 14: Edit Group

2. Modify the desired settings and click on the **Save** button to finalize changes.

Note:

New members of an existing group will not automatically obtain the group configuration template. The template must be manually pushed to the new member devices.

Download Configuration File

Users can download the group configuration template by clicking on the  button for the desired group.

Figure 15: Download Configuration File

Delete Group

Users can delete groups by selecting the desired groups and clicking on the **Delete** button in the top-left corner of the **By Group** page.

Note:

The existing timing tasks involved the group configuration template will be reserved, and the timing task will be executed with the original group configuration template.
