CHANGE LOG

This section documents significant changes from previous firmware versions. Only major new features or major document updates are listed here. Minor updates for corrections or editing are not documented here.

Wave Lite Version 1.0.3.26

- Added support for FIR and PLI. [Wave Lite Technical Specifications]
- Added support to delete call history [Delete All Call History]
- Added support for 100rel [Enable 100rel]

Wave Lite Version 1.0.3.19

No major changes

Wave Lite Version 1.0.3.16

- Added provisioning settings support [Provisioning Settings].
- Added Filter characters configuration support [Filter Characters].
- Added Local RTP port configuration support [Local RTP Port].

Wave Lite Version 1.0.2.16

- Added video software encode feature.
- Add IP call feature [Direct IP Call].
- Added Speaker / MIC gain settings [Audio Settings].
- Added audio recording feature [Call Recording].
- Add "Check SIP User ID for Incoming INVITE" [Check SIP User ID for Incoming Invite].
- Add GDS Settings and open the door feature [GDS Settings] [CONNECTING WAVE LITE WITH GDS3710 DOOR SYSTEM].
- Support audio Codec G.729 [Voice / Video Codecs and Capabilities] [Preferred Vocoder].
- Remove IPVideoTalk account.

Wave Lite Version 1.0.2.2

• This is the initial version for Wave Lite Android[™].

WELCOME

Thank you for using Wave Lite. To meet the requirements of our customers, Wave Lite emerged on the basis of our existing multimedia VoIP Phones and enable users to move freely and continue to receive calls from any business or residential SIP account. The Wave Lite is a free softphone application that allows users to connect to their SIP accounts from anywhere in the world and it supports Android[™] 4.0 and higher, and it is compatible with most of Android[™] mobile phones and tablets.

By combining powerful phone functions and integration of Grandstream UCM applications, businesses throughout the world can use Wave Lite for all communication and productivity requirements with unprecedented high quality experience.

PRODUCT OVERVIEW

Feature Highlights

The following tables contain the major features of the Wave Lite IOS[™]:

Table 1: Wave Lite Features at a Glance

<section-header><section-header><section-header><section-header></section-header></section-header></section-header></section-header>	 Support Android[™] 4.0 and higher Standard SIP-based softphone with exceptional voice quality Strong security features including SIP over TLS and 128 or 256-bit SRTP Support 6 SIP accounts, up to 6-way audio conferences Support CID, voicemail and call encryption Support synchronize with local Contacts and call history on the phone Enterprise features including UCM integration, BLF, call transfer/pickup, LDAP Powerful NAT traversal options including automatic NAT discovery, STUN and UPnP Automatic call forward based on time and location rules Support G.711, G.726, G.722, iLBC, Opus, and G.729 Automatic provision including XML provision and QR code scan Fully customizable skins and themes for optional branding needs
--	---

Wave Lite Technical Specifications

The following table resumes all the technical specifications including the protocols / standards supported, voice codecs, telephony features, languages and upgrade/provisioning settings for the Wave Lite:

Lines	6 lines with up to 6 independent SIP accounts
Protocols and	SIP RFC3261, TCP/IP/UDP, RTP/RTCP, HTTP/HTTPS, DNS (A record, SRV,
Standards	NAPTR), STUN/ICE, SIMPLE, LDAP, TLS, SRTP, IPv6
Network	Support 2G/3G/4G and WiFi
Graphic Display	480x800 resolution or higher
Camera	Support forward or rear facing cameras
Bluetooth	Yes, supports mobile device's bluetooth

Table 2: DP750 Technical Specifications

Voice / Video Codecs and Capabilities	Support G.711µ/a, G.722 (wide-band), G.726-32, iLBC, G.729, GSM, DTMF \langle In audio, RFC2833, SIP INFO), Opus, HD Audio, H264, video resolution up to 720p HD, FIR and PLI
DTMF	In audio, RFC2833, SIP INFO
Audio Quality	Full-duplex speaker, AEC, AGC, Noise Reduction, PLC, Adaptive JIB
Telephony Features	Call hold, mute, transfer, forward (unconditional/no-answer/busy/time-based), call park, paging/intercom, DND (Do Not Disturb), busy lamp field (BLF), LDAP contacts, call waiting, call history, flexible dial plan, custom ringtones, server redundancy & fail-over, BLF
UCM Integration	Supports many functions like QR code scan
Mobile Device Integration	Supports background mode, proximity sensor for in-call touch screen and keys lock, auto rotation, GPS location based call forward (pending)
Feature Functions	LDAP, MWI (Message Waiting Indicator), display instant online status, call history and messages
QoS	Layer 3 (ToS, DiffServ, MPLS) QoS
Security	Support AES configuration file, TLS encryption, SRTP encryption (128-bit and 256-bit), HTTPS
Multi-language	English, Simplified Chinese, Polish, Germany, Russian, Italian, Arabic, Spanish, Portuguese, French, etc.

Wave Lite Android[™] Prerequisites

The Wave Lite is compatible with most of Android[™] mobile phones and tablets running Android[™] 4.0 or higher version and it supports 2G/3G/4G and WiFi. Users could download Wave Lite via scan QR code, or from Google Play store.

Note: When using the Wave Lite for the first time, users have to confirm whether allow the application to read local contacts from the phone. If it allows, users could view local contacts on the corresponding Wave Lite screen.

To fully manipulate the Wave Lite capacitive touch screen, use fingers to operate following the introductions below on the Wave Lite icons, buttons, menu items, onscreen keyboard, etc.

Figure 1: Wave Lite Finger Gestures on the Touchscreen

- Tap: Slightly touch the screen with fingertip once to initiate menu, options or applications.
- **Long Press:** Touch the screen with fingertip for about 2 seconds without lifting finger from the screen to bring up the context menu for more operations.
- **Press and Drag:** Press the item and move it by dragging the finger up, down, left or right, without lifting finger from the screen.
- Flick and Slide: Touch the screen with fingertip and slide over the screen. For example, users could slide up to scroll up the page, slide down to open dropdown menu, slide left to delete an item from the list. If the finger stays on the screen for too long, the item may be selected and sliding will not occur.

Using Wave Lite

This chapter provides basic operations on the Wave Lite, including making / receiving calls, call transfer, conference calls, managing contacts and etc...

Dial Screen

Tap on the keypad button at the bottom of screen to open dial screen, as shown in figure 2.

Switch account	► ► Call H	<mark>listory</mark> Misse	•d 1 • 320501	Account status

	\bigtriangledown	0			,

Figure 3: Select Account

- 3. Tap the right area to go back to the dial screen;
- 4. Enter the phone number on the keypad;
- 5. Tap on ^{Content} to dial out with SIP account; Tap on ^{Content} and select "Local Call", "Video Call" or "Paging" to dial out via local phone number, or select "New Contact" to add the number as a contact guickly.

Note:

- By default, Wave Lite allows users to press # key as SEND key. This behavior can be disabled via set option "Use # as Dial Key" to "No" under Settings->Account Settings.
- If inserting an active SIM card into the phone, users could make calls with the SIM card number but cannot send messages with the local phone number.

Redial

Users can dial out the last dialed number if there is dialed call history.

- 1. Access the dial screen;
- 2. Press # key to dial out the last dialed number.

Dialing a Number via Call History

The Wave Lite call history is listed on the upper of the dial screen. It displays all call histories (local and SIP

account) and missed calls. Navigate on the call history entries by tapping on button in the bottom of the main screen to slide up/down as displayed on the following figure.

Figure 4: Dial-up via Call History

Note: Dialing out through call history will use the account which made the last call.

Dialing a Number via Contacts

Access Contacts by tapping on \bigcirc icon on the bottom of the main screen, the SIP contacts and LDAP Contacts (please go to Settings page to configure first) are shown up individually. Follow the steps in figure 6 to dial a number via Contacts.

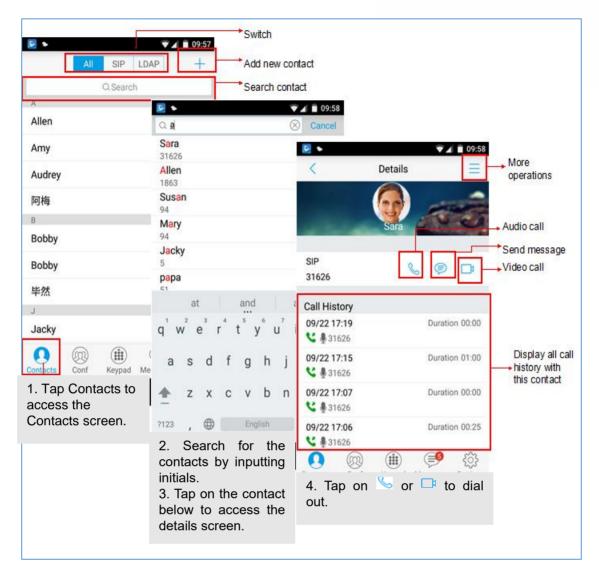

Figure 5: Dial-up via Contacts

Switching Audio Channel during Call

Users could switch lines by sliding the call screen when there are multiple calls, as shown in figure below.

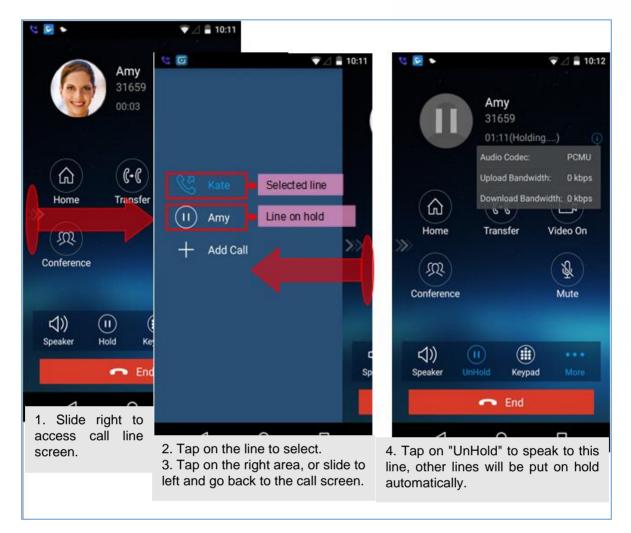

Figure 6: Switch Call Lines

Answering Calls

Single Incoming Call

When the phone is at idle state, and there is an incoming audio call, the status bar will display the icon and the phone screen is as shown on the figure below.

Tap on button Answer to answer the call via speaker, or tap on button Reject to reject the call.

Figure 10: Multiple Calls - Video call

Active Call

During an active call, users could hold/resume call, mute/unmute, input DTMF, add new call, initiate conference, end a call or switch audio channel, turn on/off video, switch front/rear camera. Tap \gg on left screen, and slide right to bring up the lines list. Users could switch to other lines or add a new call.

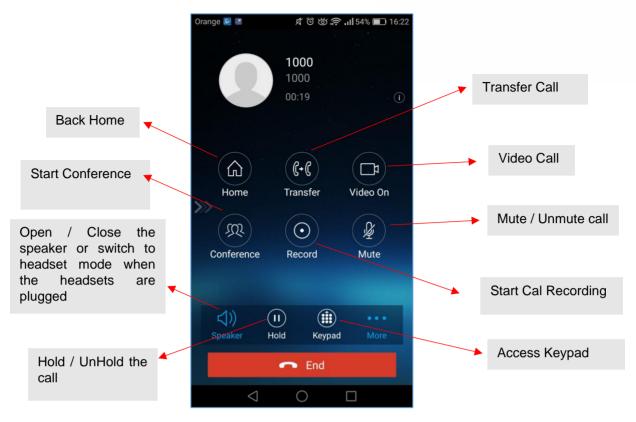

Figure 11: Audio Call Interface

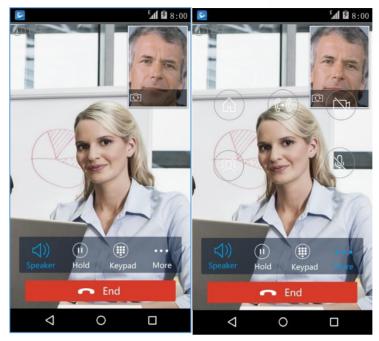

- Islide to right to add new call or switch lines.
- **Speaker**: Switch voice channels to speaker or 3.5mm headset if it is plugged in.
- Hold/UnHold: During the call, users could press the HOLD button to hold or resume the call at any time.
- Keypad: Tap on the icon to bring up digital soft keypad for inputting DTMF.
- More: Access more operations including Home, Transfer, Conference and Mute/Unmute.
- Home: Back to the home screen (dial screen), the active call interface will be hidden; users could

tap on button 🖤 at the upper left corner of the screen to go back to the call interface.

- **Transfer**: Switch to the transfer screen. Wave Lite supports blind transfer and attended transfer. Please refer to chapter **Call Transfer** for more details.
- Video On: Enable video call. Tap to dial up video call to the callee.
- **Conference**: Bring up conference screen.
- **Mute**: Tap on the icon to mute/unmute the call.
- End: Tap on the icon to end the call.

The video call screen is shown below; the basic operations are the same as audio call.

Figure 12 Video Call Interface

Call Hold/Resume

During the active call, press the **HOLD** button to put the call on hold. Users could dial up or answer a new call. The call hold screen is displayed on the following screenshot:

Figure 16: Call Recording

Missed Calls

When there is a missed call, the phone will display So on the status bar and prompt on Wave Lite call history list, as shown in figure below.

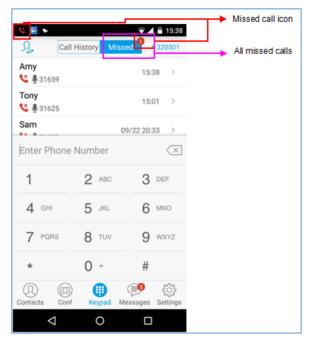

Figure 17: Missed Call Screen

Call Transfer

A call can be transferred to another party during the call. The Wave Lite supports blind transfer and attended transfer.

Blind Transfer

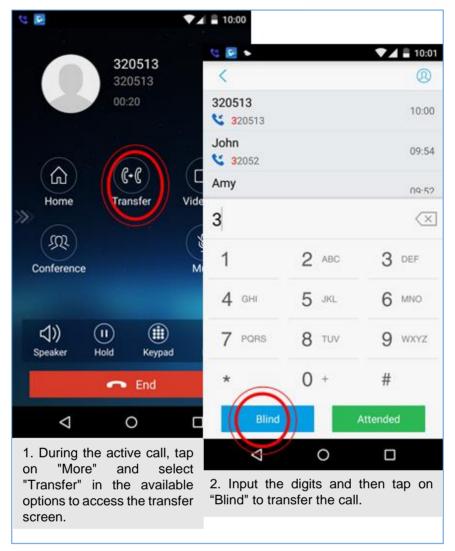

Figure 18: Call Transfer - Blind Transfer

When the ringback tone is played, users will automatically go back to the main screen (dial screen) to complete the transfer after the callee answers the call.

Note: If entered incorrect digits, tap on button \checkmark to delete the digits one by one, or long press it to clear all digits.

Attended Transfer After Calling

Wave Lite supports attended transfer before or after calling, which provides users a fast and easy way to complete attended transfer. Make an active call first and follow the steps below to transfer the call to the third party.

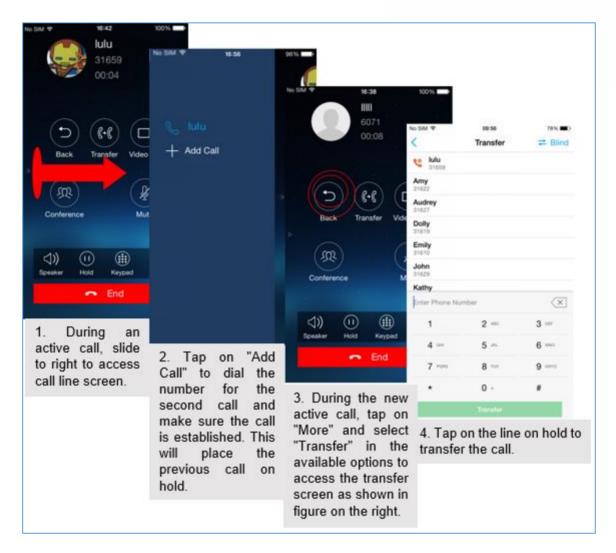

Figure 19: Attended Transfer after Calling - Transferring

Attended Transfer Before Calling

Users can also consult the third party first before transferring the call. The following steps illustrate how to attend before calling:

To end the conference, users could tap

on phone screen to disconnect all

the participants from the conference. If the remote participant hangs up the call, it will be disconnected from the conference, but other participants in the conference will stay in the conference.

Direct IP Call

The Wave Lite supports Direct IP Call which allow users to make calls without a SIP proxy, VoIP calls can be made between the phone running the application and the destination phone if:

- The phone running the application and the destination phone have public IP addresses, Or
- Both are on the same LAN/VPN using private or public IP addresses, Or
- Both can be connected through a router using public or private IP addresses (with necessary port forwarding or DMZ).

To make a direct IP call, please follow the steps bellow:

- 1. Access the dial screen;
- Input the target IP address. For example, if the target IP address is 192.168.1.60 and the port is 5062 (i.e., 192.168.1.60:5062), input the following: 192*168*1*60#5062
- 3. Press "Dial" button to initiate an audio call, or press more to access the call menu and choose "Video call" for initiating video calls.

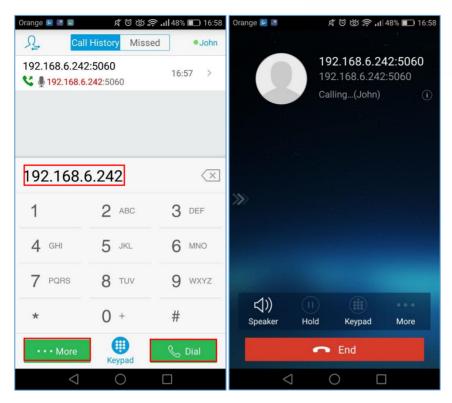

Figure 27: Direct IP Call

Voicemail

When there is a new voicemail, the voicemail icon evil will show up on the status bar, and at the same time users could see a new message prompt on the Wave Lite messages list.

To configure voicemail UserID, go to **Settings->Account Settings->Edit Account** to fill in the details, as shown on the screenshot below.

SETTINGS

For the first time using Wave Lite, go to the **Settings** screen to complete the basic settings, including **Account Settings**, **Advanced Settings**, **Custom Settings**, **About Version**, **Debug**, etc.

Account Settings

Wave Lite supports up to 6 independent SIP accounts and 6 lines. Users can make calls after registering

the account to the SIP server. Tap on button + at the upper right corner of the **Account Settings** screen

to add accounts. Users could add account via Generic Accounts or VOIP Providers.

To add generic account, tapping on "UCM Account (Scan QR Code)" or "UCM Account (Select QR Code Image) ", or tap on "SIP Account" to add account, as shown on figure below.

The way to add VOIP Providers accounts is the same as add generic accounts, just select the providers in the list below and input required information.

Table 3: Edit Account Parameters

Activate Account	It is used to define whether to activate account.
Account Name	Defines the name associated to the account to be displayed on the LCD.
SIP Server	Defines the domain name or IP address of your SIP server, provided by your VoIP service provider (ITSP).
SIP User ID	Configures the user account information, provided by your VoIP service provider (ITSP). It's usually in the form of digits similar to phone number or the same as the phone number.
SIP Authentication ID	Configures the SIP service subscriber's Authenticate ID used for authentication. It can be identical to or different from the SIP User ID.
Password	Defines the account password required for Wave Lite to authenticate with the ITSP (SIP) server before the account can be registered.
VoiceMail UserID	Configure the voicemail user ID to retrieve voicemail by pressing LISTEN button on the message screen. This user ID is usually the VM portal access number. For example, the UCM server voicemail access number is *97.
Display Name	Configures the name to display on LCD when calling, it needs SIP server to support it if this function is enabled.

After configuring the account, users could tap on the existing account for more settings, such as General Settings, Call Settings, SIP Settings, Network Settings and Codec Settings.

	Table 4: Account Settings - General Settings Parameters
Activate Account	Activate / deactivate the SIP account.
Set as Default	It is used to set this account as default.
Edit Account	Edits the accounts settings and parameters.
Delete Account	Deletes the current account.
	Table 5: Account Settings - Call Settings Parameters
Ringtone	Defines the ringtones played when receiving an incoming call.
DialPlan	Configures to either enable or disable the dial plan.
DialPlan Prefix	Configures the prefix to be added to each dialed number. All numbers use this account will automatically add the prefix. For example, if the prefix is 5, the phone number is 337, thus the dialing number is 5337.
DialPlan Settings	Configures the allowed dial plan for the phone. Default setting is "{ x+ \+x+ *x+ *xx*x+ }". Dial Plan Rules: 1. Accepted Digits: 1,2,3,4,5,6,7,8,9,0 , *, #, A,a,B,b,C,c,D,d; 2. Grammar: x – any digit from 0-9 X – digits from 0-9, and letters from a-z, A-Z. a) xx+ - at least 2 digit numbers

	 b) xx - only 2 digit numbers c) ^ - exclude d) [3-5] - any digit of 3, 4, or 5 e) [147] - any digit of 1, 4, or 7 f) - replace digit 2 with 011 when dialing g) - the OR operand h) {X123} - match Z123, e123, 5123, i) Back slash "\" Character can be used to escape specific letters. e.g. if { \p\a\r\k\+60 } dial plan is configured, park+60 should be able to pass dial plan check. This also can be used to escape Mark and User unreserved characters. Mark = "-" / "_" / "." / "!" / "~" / "*" / "(" / "," / ";" / "?" / "/
Use # as Dial Key	Configures the "#" key as the "Send" key. If enable, press the "#" key to dial the numbers out immediately; If set to disable, the "#" key will be included in the dialing string.
Call Forward	Tap to access Call Forward Settings screen.
Call Forward Settings	It is used to specify the Call Forward Type from 4 modes: Unconditional, Time Based, Others (Forward When busy and No Answer Forward).
Auto Answer	It is used to configure auto answer mode. If set to "Yes", the phone will automatically turn on the speaker phone to answer incoming calls after a short reminding beep. If set to "Enable Intercom/Paging", it will answer the call based on the SIP info header sent from the server/proxy. Default setting is No.

Table 6: Account Settings - SIP Settings Parameters

Enable Session Expiration	Configures the relevant parameter in "Session Expiration Settings" option below. The default setting is "No".
Session Expiration Settings	Configures the relevant session expiration parameters.
SIP Port	It is used to define the local SIP port used to listen and transmit. If enabled Random Port option on Advanced Settings screen, this option will be unavailable.
Transmission Protocol	It is used to configure the transmission protocol to transmit SIP info. Users could choose TCP/UDP/ TLS. The default is "UDP".
Unregister Before New Registration	If set to "Register All", the SIP contact header will use "*" to clear all SIP user's registration information. If set to "Do Not Register", the phone will not clear the current SIP user's info. The default is "Unregister Single", that means do not cancel the SIP user's registration information.
Register Expiration (m)	Specifies the frequency (in minutes) in which the phone refreshes its registration with the specified registrar. The minimum value is 1 minute while the maximum is 64800 minutes (about 45 days). The default value is 60 minutes (1 hour).

Only Accept SIP Requests from Known Servers	Once enabled, only accept SIP request sent from known servers, the default setting is "Disable".
Check SIP User ID for Incoming Invite	Checks SIP User ID in the Request URI of incoming INVITE; if it doesn't match the base SIP User ID, the call will be rejected. Direct IP calling will also be disabled. Default is No.
Enable 100rel	Enables PRACK (Provisional Acknowledgment) method. PRACK improves the network reliability by adding an acknowledgement system to the provisional Responses (1xx). If it's enabled, it will respond to the 1xx response from the remote party. The default setting is "Disabled"

Table 7: Session Expiration Settings Parameters

Session Expiration (s)	The SIP Session Timer extension that enables SIP sessions to be periodically "refreshed" via a SIP request (UPDATE, or re-INVITE). If there is no refresh of an UPDATE or re-INVITE message, the session will be terminated once the session interval expires. Session Expiration is the time (in seconds) where the session is considered timed out, provided no successful session refresh transaction occurs beforehand.
Min-SE (s)	The minimum session expiration (in seconds). The default value is 90 seconds.
UAC Specify Refresher	As a caller, select UAC to use the phone as the refresher; or select UAS to use the caller or proxy server as the refresher. If set to "Omit", that means do not specify the refresh object. The default setting is "Omit".
UAS Specify Refresher	As a callee, select UAC to use caller or proxy server as the refresher; or select UAS to use the phone as the refresher.
Force INVITE	The Session Timer can be refreshed using the INVITE method or the UPDATE method. Select "Yes" to use the INVITE method to refresh the session timer.
Caller Request Timer	If set to "Yes" and the remote party supports session timers, the phone will use a session timer when it makes outbound calls. The default setting is "No".
Callee Request Timer	If set to "Yes" and the remote party supports session timers, the phone will use a session timer when it receives inbound calls. The default setting is "No".
Force Timer	If Force Timer is set to "Yes", the phone will use the session timer even if the remote party does not support this feature. If Force Timer is set to "No", the phone will enable the session timer only when the remote party supports this feature. To turn off the session timer, set Caller Request Timer, Callee Request Time and Force Timer all to "No".

Table 8: Account Settings - Network Settings Parameters

Proxy-Require	A SIP Extension to notify the SIP server that the phone is behind a NAT/Firewall. Do not configure this parameter unless this feature is supported on the SIP server.			
Outbound Proxy	Configures the IP address or Domain name of the Primary Outbound Proxy, Media Gateway, or Session Border Controller.			
Secondary Outbound Proxy	Configures the IP address or Domain name of the Secondary Outbound Proxy, Media Gateway, or Session Border Controller. Secondary outbound proxy will be used when the primary outbound proxy fails.			
NAT Traversal	Enables or disables the NAT traversal mechanism. The default setting is "Keep-alive".			
	• If set to "STUN" and STUN server is configured, the phone will route according to the STUN server; If NAT type is Full Cone, Address-Restricted Cone or Port-Restricted Cone, the phone will try to use public IP addresses and port number in all the SIP&SDP messages.			
	• The phone will send empty SDP packet to the SIP server periodically to keep the NAT port open if it is configured to be "Keep-alive".			
	Configure this to be "NAT NO" if an outbound proxy is used.			
	• Configure this to be "UPnP" if the router supports UPnP.			
	• If set to "Auto", the phone will try to use all traversal methods mentioned above until find the available one.			
DNS Mode	Controls how the search appliance looks up IP addresses for hostnames. There are three modes: A Record, SRV, NAPTR/SRV. The default setting is "A Record". If the user wishes to locate the server by DNS SRV, the user may select "SRV" or "NATPTR/SRV".			
	Table 9:Account Settings - Codec Settings Parameters			
DTMF	Users can choose different ringtones.			
	Specifies the mechanism to transmit DTMF digits. There are 3 supported modes:			
	• In audio: which means DTMF is combined in the audio signal (not very reliable with low-bit-rate codecs);			
	 RTP (RFC2833): permits to specify DTMF with RTP packet. Users could know the packet is DTMF in the RTP header as well as the type of DTMF; 			
	• SIP INFO: uses SIP INFO to carry DTMF. The defect of this mode is that it's easily to cause desynchronized of DTMF and media packet for the reason the SIP and RTP are transmitted respectively.			
	Default settings is via "RFC2833".			
Preferred Vocoder	Selects which codecs will be used on Wi-Fi, 2G, 3G and 4G Multiple vocoder types are supported on the phone (PCMU, PCMA, OPUS, G722, G726_32, iLBC, G729 and GSM). The vocoders in the list is a higher preference. Users can configure vocoders in a preference list that is included with the same preference order in SDP message			
	with the same preference order in SDP message.			

H.264 Image SizeConfigures different image size (720P, VGA, CIF, QVGA and QCIF) in different network environment. For Wi-Fi network, the default setting is VGA; For 2G/3G/4G mobile network, the default setting is QVGA.Video Bit RateConfigures different video bite rate in different network environment. It is recommended to increase the bit rate if the bandwidth is sufficient, and the video quality will be reduced if the bandwidth is not enough. For Wi-Fi network, the default setting is 512kbps; For 2G/3G/4G network, the default setting is 192kbps.SDP Bandwidth AttributeSelect the SDP bandwidth attribute from "Standard"," Media Level"," Session Level" or "None". • Standard: Use AS at the session level and TIAS at the media level. • Media Level: Use AS at the session level. • None: Don not change the format. Please do not change the format or it may cause decode failure if unclear about what format the server supports.H.264 Payload TypeConfigures the SRTP Mode, when set to "Enable and Force" it will enable and force to use SRTP and when set to: "Enable but Not Force", it will enable but not force to use SRTP. Advanced Settings

Advanced Settings include General Settings, Call Settings, Network Settings and Additional Settings.

General Settings

	Table 10: Advanced Settings - General Settings Parameters	
Edit Before Dial	Configures whether to edit number before dial. If set to "No", tap on the contact or one call history entry on call screen to dial out with the last dial-out account directly. If set to "Yes", when tap on the contact or one call history entry on call screen, the phone will automatically fill in the corresponding number to the input box, users could edit the number before dial out.	
Default Account Registration Notification	Defines whether to enable registration notifications for default account. If enabled, users will see the notifications in the status bar once the default account status is changed.	
Vibrate When Ringing	Configures whether to vibrate when ringing. It is only applicable to the incoming calls for the Wave Lite. The phone settings priority is higher than this option. When set the phone to silent mode, the phone will not vibrate when ringing even set this option to "Yes".	
Start on Boot	Configures whether auto start Wave Lite when starting up.	

Always use default account when dialing from native dialer	When this option is enabled, the phone will redirect the dialed number on the native dialer to the dialer of the Wave Lite Application and the calls can be made at this points using the default registered account on the application.			
Local RTP Port	Defines the local RTP-RTCP port pair used to listen and transmit. If it is configured with X, in channel 0 the port X will be used for audio RTP message, the port X+1 for audio RTCP message, the port X+2 for video RTP message and the port X+3 for video RTCP. In Channel 1, each port number will be incremented by 4 for each message. This increment rule will apply to other channels and other port numbers. By default, the Account 1 will use Channel 0, Account 2 Channel 1, Account 3 Channel 2, Account 4 Channel 3, and Account 5 Channel 4 and Account 6 Channel 5. If an account needs to establish multiple session simultaneously, the system will use the ports in the next available channels. The default value is 5004. The valid range is from 1024 to 65400.			
Random Port	Forces Wave Lite to use random ports for both SIP and RTP messages. This is usually necessary when multiple phones are behind the same full cone NAT. The default setting is "No". Note: This parameter must be set to "No" for Direct IP Calling to work.			

Call Settings

Filter Characters	Sets the characters for filter when dial out numbers. Users could set up multiple characters. For example, if set to "[()-]", when dial (0571)-8800- 8888, the character "()-"will be automatically filtered and dial 057188008888 directly. Note: The space also can be used, and it will be automatically filtered. The default value is "[()-]".
DND	Enable/Disable the DND feature
DND Settings	Configures the time condition for the DND feature, this option will be grayed if the DND feature is disabled.
Hard Encoder	Used to enable hardware encoding, this option is enabled by default

Call Settings is mainly used for DND settings and Filter Characters. When DND is on, the phone will reject

calls automatically and the status bar will display the icon **S**. Tap on "DND Settings" to configure as shown on the figures below:

4		0		5

Figure 53: DND Settings Screen

Note:

- When Wave Lite is in an active call, turning on/off DND will not affect the current active call. It will take effect on the next incoming call.
- When the DND is on, users could view all the incoming calls in missed call history.

Audio Settings

Noise Reduction Level	Wave Lite provides users with multiple noise reduction levels. Choose the level		
	according to the specific environment.		
Speaker Gain	Adjusts the speaker gain, available settings are (+6db, 0db and +6db). Default settings is: 0db.		
Microphone Gain	Adjusts the microphone gain, available settings are (+6db, 0db and +6db). Default settings is: 0db.		

Network Settings

Wave Lite supports data communication via 2G/3G/4G and WiFi, you can also configure QoS settings.

Table 11: Advanced Settings - Network Settings Parameters			
Network	Users could use Wave Lite in 2G/3G/4G/WiFi.		
Only Use This WiFi to Register Account	In the WiFi environment, only register account with this specified connected WiFi.		
STUN Server Settings	The IP address or URL of the STUN server. Only non-symmetric NAT routers work with STUN.		
QoS Settings	Configures layer 3 SIP QoS and layer 3 audio QoS. The valid range is 0-63. The default setting is 48.		

Additional Settings

Та	ble 12: Advanced Settings - Additional Settings Parameters		
Validate Server Certificate	Validates the servers certificate chain for the server's certificate when enabled. Default settings is "Disabled".		
Config Server Path		ress or URL for the server. Wave Lite could obtain the om the server path automatically.	
Export Configuration	Exports the control config.	figuration files to the path on the phone: /sdcard/ Wave Lite/	
GDS Settings	GDS Name	Specifies the name to identify the GDS3710. Note : The Wave Lite support up 10 GDS items	
	GDS Number	Specifies the GDS number which is the SIP user ID configured on GDS3710.	
	GDSDetermines the GDS password which should matPasswordconfigured on "Remote PIN to Open the DoorGDS3710 settings.		
LDAP Settings	Tap to access the LDAP Settings screen to set up features. Users could set QR Code Scan, Select QR Code Image or Manual Settings.		
	• Tap on "Sca	an QR Code" to access QR code scan screen, scan the QR	
	code which	contains LDAP information sent by the UCM server to	
	configure LD	DAP settings.	
	• Tap on "Sele	ect QR Code Image" to access screen with QR code image,	
	select the image which contains LDAP information to config settings.		
	• Tap on "Mar	nual Settings" to access screen as shown in Figure 55.	
	(Please refer to Table 13 for the description of the manual settings)		
BLF	Configures whether to enable contacts status detection in BLF list. The status will be shown under SIP option of the Contacts.		

BLF List Add the contacts to monitor its BLF status online in BLF list. The status will be shown in SIP option of the Contacts.

Offline. Unable to detect the contact status, or the contact's registration is failed.

Busy. The active line of the contact is busy.

Online. The call line is in idle.

Note: The BLF function requires that the server supports BLF feature.

Table 13: LDAP Settings Parameters

LDAP Lookup When Dialing	Defines whether to search LDAP when dialing. Default setting is "Yes".
LDAP Lookup When Incoming Call	Defines to search LDAP when there is an incoming call. The default setting is "Yes".
Server Address	Configures the LDAP server URL or IP address.
Port	Configures the LDAP server port. The default value is 389.
Base DN	Configures the base DN which is the root directory of the LDAP server, it means under which directory to search contact.
Username (Binding DN)	Specifies the username to access the LDAP server.
Password	Fill in the password to access the LDAP server.
LADP Name Attributes	Specifies the "name" attributes of each record which are returned in the LDAP search result. Example: gn cn sn description

	Specifies the "number" attributes of each record which are returned in the
	LDAP search result.
LADP Number	Example:
Attributes	telephoneNumber
	telephoneNumber Mobile
	Configures the filter used for name lookups.
	Examples:
	((cn=%)(sn=%)) returns all records which has the "cn" or "sn" field containing
	with the entered filter value;
LDAP Name Filter	(!(sn=%)) returns all the records which do not have the "sn" field containing
	with the entered filter value;
	(&(cn=%) (telephoneNumber=*)) returns all the records with the "cn" field
	containing with the entered filter value and "telephoneNumber" field set.
	Configures the filter used for number lookups.
	Examples:
	((telephoneNumber=%)(Mobile=%) returns all records which has the
LDAP Number Filter	"telephoneNumber" or "Mobile" field starting with the entered filter value;
	(&(telephoneNumber=%) (cn=*)) returns all the records with the
	"telephoneNumber" field starting with the entered filter value and "cn" field
	set.
LDAP Display Name	Configures the entry information to be shown on phone's LCD. Up to 3
Attributes	fields can be displayed. Example: %cn %sn %telephoneNumber
	The maximum contacts results return to the LDAP server. If set to "1", The
Max Hits (1-100)	server will return all query results. The default setting is 100.
Search Timeout (s)	Specifies the interval (in seconds) for the server to process the request and client waits for server to return. The default setting is 10 seconds.
Opennestien Opennik	
Connection Security	Configures LDAP connection security mode, users could choose None or
Туре	SSL.

Provisioning Settings

Config Upgrade Via	Selects provisioning method: TFTP, HTTP or HTTPS. Default setting is "HTTPS".
Config Server Path	Sets IP address or domain name of configuration server. The server hosts a copy of the configuration file to be installed on the Wave Lite. Default is fm.grandstream.com/gs.

Config HTTP/HTTPS User Name	Configures the user name for the config HTTP/HTTPS server.
Config HTTP/HTTPS Password	Configures the password for the config HTTP/HTTPS server.
Start Provisioning	Click to confirm starting provisioning process to query the Config Server Path

Custom Settings

Users could configure Color and Languages on Custom Settings screen.

Table 14: Custom Settings Parameters									
Color	Configures the color of icon, tab bar, navigation bar, send & receive message backgrounds.								
Theme	Defines the theme to use for the application. Three themes are supported: white, black and blue. Default theme is: white								
Languages	Selects the language on the application to be displayed.								

About

About page permits users to verify the version of the application running as shown on the following screenshot, access the Grandstream Privacy Statement web page when clicking on "Privacy agreement", share this application via the **Bluetooth**, **Gmail**, **Google**, etc. and redirect users to Grandstream support Web page when pressing on Support in case the users need any help regarding the GSWave App.

CONNECTING WAVE LITE WITH GDS3710 DOOR SYSTEM

The Wave Lite can interact with the GDS3710 Door System to allows users to open door, initiate call to the GDS3710 and gets a real-time audio / video stream.

For more details about GDS3710, please refer to GDS3710 Web page.

The following steps illustrate how to configure GDS3710 settings on the Wave Lite assuming that the Wave Lite and GDS SIP extension are correctly registered.

- 1. Configure your SIP extension on the Wave Lite using the same SIP server on which the GDS extension is registered.
- 2. Access Settings -> Advanced Settings -> Additional Settings -> GDS Settings.
- 3. Click on "Add New Item" and configure your GDS settings:
 - GDS Name: Specifies the name to identify the GDS3710.
 - **GDS Number:** Specifies the SIP extension number of the GDS3710
 - **GDS Password:** Configure the remote PIN code used on the GDS available under GDS3710 web GUI -> Door System Settings -> Basic Settings -> Remote PIN to open the door.
- 4. Press on \checkmark to save the new GDS settings and add the new item as displayed below.

Note: The Wave Lite supports up 10 GDS3710 door systems.
